

Closing Ceremony Speech - SGS MUN 2019

We were all here this weekend to represent our countries, push ourselves in debate, and pass good resolutions. But although our success in these things is important to us, I would like to take a few minutes to talk about, not success, but failure.

Having participated in our discussions, we should remember that there is no such thing as an overnight success; it's a fallacy, a myth pedalled in a world where someone may be virally catapulted to fame as an internet phenomenon in a matter of 24 hours. What I would like us to dwell on as this weekend is drawing to a close, is the work, the process that takes us towards success, towards our goals. That process sometimes includes failure. Not winning an award, but focusing on learning and improving.

There was once a lady in a market place, she saw Picasso and asked him for a self-portrait. He agreed...and drew a perfect picture in 30 seconds. He then handed it back to her and asked for \$30,000. She questioned how it could cost that much when it only took him 30 seconds. He replied, "It took me 30 years to be able draw that in 30 seconds".

It's amazing how - so often - the time taken to achieve success is forgotten; how frequently we forget what lies beyond the tip of the iceberg, the shadowy section underneath the water. But that part, the part we don't see, the part full of failure, learning and progress, is absolutely what makes success possible. If we have experienced that success today, it is because we have invested time, valued experience and learned from our mistakes and failures.

When you look at the definition of failure in the dictionary, it is defined by three words: lack of success. If we fear failure and imperfection, it ultimately means that we don't value growth and learning, it means we don't value experience and struggle, and our obsession with winning means that we're actually letting go of what we could be learning at every single point. So I hope that this weekend you have been brave and courageous in your discussions, have not be afraid to express your views. To those of you who did not win awards today, keep trying. There are always more conferences to get involved in. Learn from your mistakes, whether it is improving your public speaking skills, spending more time researching issues or gaining confidence in the committee room. Being open to improvement is important.

Conversational Informatics Toyoaki Nishida, 2008-03-11 Conversational informatics investigates human behaviour with a view to designing conversational artifacts capable of interacting with humans in a conversational fashion It spans a broad array of topics including linguistics psychology and human computer interaction Until recently research in such areas has been carried out in isolation with no attempt made to connect the various disciplines Advancements in science

and technology have changed this Conversational Informatics provides an interdisciplinary introduction to conversational informatics and places emphasis upon the integration of scientific approaches to achieve engineering goals and to advance further understanding of conversation It features a collection of surveys structured around four prominent research areas conversational artifacts conversational contents conversation environment design and conversation measurement analysis and modelling Conversational artifacts shows how synthetic characters or intelligent robots use eye gaze gestures and other non verbal communicators to interact Conversational contents looks at developing techniques for acquiring editing distributing and utilising the contents that are produced and consumed in conversation Conversation environment design explains techniques for creating intelligent virtual environments and for representing individuals within a virtual environment by monitoring and reproducing their non verbal conversational behaviour Conversation measurement analysis and modelling demonstrate how conversational behaviour can be measured and analyzed Conversational Informatics will be an invaluable resource for postgraduate students and researchers in Computer Science and Electrical Engineering as well as engineers and developers working in the field of automation robotics and agents technology Schizophrenia Bulletin ,1999

Proceedings of the Fourth International Workshop on the History of Speech Communication Research Volín,Pavel Šturm,2021-09-01 This volume contains studies presented at the 4th International Workshop on the History of Speech Communication Research HSCR 2021 The series of workshops was initiated in Dresden in 2015 The current workshop took place in Prague at the Institute of Phonetics Charles University amid the ever changing pandemic circumstances for the first time in a hybrid form There are nine contributions written by 12 authors from six countries The contributions analyze the contextual background of particular personalities or investigate how specific research practices developed over time Moreover each contribution demonstrates a significant connection between various aspects of speech communication research and the wider social context A special theme of this workshop was the link in linguistic signs between the form sound and the meaning sense The phonetic endeavour was often claimed to concern only the form while meaning was delegated to someone else This is not only one sided but also difficult to integrate into the large body of scientific knowledge as the opening keynote emphasized Contemporary Sociolinguistics Aleksandr Davidovich Shve?t?s?er,1986-01-01 The common core of different sociolinguistic schools includes a number of general problems such as the social differentiation of language the sociolinguistic aspects of bilingualism and diglossia the typology of linguistic situations language engineering national and standard languages and their social functions etc Still urgent to the sociolinguists of all countries and all trends is the problem of developing their own methodology and the application of research methods developed by other disciplines to sociolinguistics The above mentioned problems constitute the major thrust of this book It is not merely a summary of studies by a certain sociolinguistic school or even several schools the main goal of the author is to elucidate a number of major philosophical and theoretical questions fundamental problems of sociolinguistics and methods of sociolinguistic

How and Why Does Spatial-Hearing Ability Differ among Listeners? What Is the Role of Learning and Multisensory Interactions? Guillaume Andéol,Brian D. Simpson,Ewan A. Macpherson,2016-08-29 Spatial hearing ability has been found to vary widely across listeners A survey of the existing auditory space perception literature suggests that three main types of factors may account for this variability physical factors e g acoustical characteristics related to sound localization cues perceptual factors e g sensory cognitive processing perceptual learning multisensory interactions and methodological factors e g differences in stimulus presentation methods across studies However the extent to which these and perhaps other still unidentified factors actually contribute to the observed variability in spatial hearing across individuals

with normal hearing or within special populations e.g hearing impaired listeners remains largely unknown Likewise the role of perceptual learning and multisensory interactions in the emergence of a multimodal but unified representation of auditory space is still an active topic of research A better characterization and understanding of the determinants of inter individual variability in spatial hearing and of its relationship with perceptual learning and multisensory interactions would have numerous benefits In particular it would enhance the design of rehabilitative devices and of human machine interfaces involving auditory or multimodal space perception such as virtual auditory multimodal displays in aeronautics or navigational aids for the visually impaired For this Research Topic we have considered manuscripts that present new methods or review existing methods for the study of inter individual differences present new data or review existing data concerning acoustical features relevant for explaining inter individual differences in sound localization performance present new or review existing psychophysical or neurophysiological findings concerning spatial hearing and or auditory perceptual learning and or multisensory interactions in humans normal or impaired young or older listeners or other species discuss the influence of inter individual differences on the design and use of assistive listening devices rehabilitation or human machine interfaces involving spatial hearing or multimodal perception of space ergonomics
