Babbitt,Jane E. Kister, This collection of reprinted Featured Reviews published in Mathematical Reviews MR in 1995 and 1996 makes widely available informed reviews of some of the best mathematics published recently Featured Reviews were introduced in MR at the beginning of 1995 in part to provide some guidance to the current research level literature With the exponential growth of publications in mathematical research in the first half century of MR it had become essentially impossible for users of MR to identify the most important new research level books and papers especially in fields outside of the users own expertise This work identifies some of the best new publications papers and books that are expected to have a significant impact on the area of pure or applied mathematics with which researchers are concerned All of the papers reviewed here contain interesting new ideas or applications a deep synthesis of existing ideas or any combination of these The volume is intended to lead the user to important new research across all fields covered by MR **Secondary Algebra Education: Revisiting Topics and Themes and Exploring the Unknown** Paul Drijvers,2011-10-19 Nowadays algebra education is subject to worldwide scrutiny Different opinions on its goals approaches and achievements are at the heart of debates among teachers educators researchers and decision makers What should the teaching of algebra in secondary school mathematics look like Should it focus on procedural skills or on algebraic insight Should it stress practice or integrate technology Do we require formal proofs and notations or do informal representations suffice Is algebra in school an abstract subject or does it take its relevance from application in daily life contexts What should secondary school algebra education that prepares for higher education and professional practice in the twenty first century look like This book addresses these questions and aims to inform in service and future teachers mathematics educators and researchers on recent insights in the domain and on specific topics and themes such as the historical development of algebra the role of productive practice and algebra in science and engineering in particular The authors all affiliated with the Freudenthal Institute for Science and Mathematics Education in the Netherlands share a common philosophy which acts as a sometimes nearly invisible backbone for the overall view on algebra education the theory of realistic mathematics education From this point of departure different perspectives are chosen to describe the opportunities and pitfalls of today s and tomorrow s algebra education Inspiring examples and reflections illustrate current practice and explore the unknown future of algebra education to appropriately meet students needs *Algebra: Themes, Tools, Concepts -- Teachers' Edition* Henri Picciotto,Anita Wah,1994 Algebra William G. McCallum,Eric Connally,Deborah Hughes-Hallett,2014-11-25 Algebra Form and Function was designed based on the fundamental goal for a student to foster understanding of algebraic structure that is an understanding of how the arrangements of symbols allows us to predict for example the behavior of a function or the number of solutions to an

equation Mastering algebraic structure enables students to read algebraic expressions and equations in real life contexts not just manipulate them and to choose which form or which operation will best suit the context It facilitates being able to translate back and forth between symbolic graphical numerical and verbal representations By balancing practice in manipulation and opportunities to see the big picture Algebra Form and Function offers a way for teachers to help students achieve real mastery of algebra
