Anglo Saxon Farms And Farming Medieval History And Archaeology:

Anglo-Saxon Farms and Farming Debby Banham, Rosamond Faith, 2014 Farming was the basis of the wealth that made England worth invading twice in the eleventh century while trade and manufacturing were insignificant by modern standards In Anglo Saxon Farms and Farming the authors employ a wide range of evidence to investigate how Anglo Saxon farmers produced the food and other agricultural products that sustained English economy society and culture before the Norman Conquest The first part of the volume draws on written and pictorial sources archaeology place names and the history of the English language to discover what crops and livestock people raised and what tools and techniques were used to produce them In part two using a series of landscape studies place names maps and the landscape itself the authors explore how these techniques might have been combined into working agricultural regimes in different parts of the country A picture emerges of an agriculture that changed from an essentially prehistoric state in the sub Roman period to what was recognisably the beginning of a tradition that only ended with the Second World War Anglo Saxon farming was not only sustainable but infinitely adaptable to different soils and geology and to a climate changing as unpredictably as it is today

Anglo Saxon kingdom in Britain by an acclaimed historian of this period The eighth century has for too long been a neglected era in British history a shadow land between the death of Saint Bede and the triumphs of King Alfred and the eventual unification of England But before the victories of King Alfred against the Viking invaders the kingdom of Mercia spread across a broad swathe of central England was the reigning power that exercised central political authority for the first time since the Roman Empire This authority was used to construct trading networks and markets to develop strong economic cultural and political links with the Continent and to lay the foundations for a system of defense that would be invigorated and reinvented by Alfred at the end of the ninth century Two kings thelwald 716 757 and Offa 757 796 dominated the political landscape of the rising power of Mercia During their reigns monasteries became powerhouses of royal patronage economic enterprise and trade Offa constructed his grandiose dyke along the borders of the warlike Welsh Kingdoms and more subtly spread his message of political superiority through coinage bearing his image But thelwald and Offa between them built something with an even more substantial legacy a geography of medieval England And these two kings engineered a set of tensions between kingship landholding and the church that were to play out dramatically at the dawn of the Viking Age In this illuminating history of Early Medieval Britain Max Adams reconnects the worlds of the three kings thelwald Offa and

M. Dobney, D. Jaques, James Barrett, Cluny Johnstone, 2007-12-12 The environmental archaeological evidence from the site of Flixborough in particular the animal bone assemblage provides a series of unique insights into Anglo Saxon life in England during the 8th to 10th centuries The research reveals detailed evidence for the local and regional environment many aspects of the local and regional agricultural economy changing

resource exploitation strategies and the extent of possible trade and exchange networks Perhaps the most important conclusions have been gleaned from the synthesis of these various lines of evidence viewed in a broader archaeological context Thus bioarchaeological data from Flixborough have documented for the first time in a detailed and systematic way the significant shift in social and economic aspects of wider Anglo Saxon life during the 9th century AD and comment on the possible role of external factors such as the arrival of Scandinavians in the life and development of the settlement The bioarchaeological evidence from Flixborough is also used to explore the tentative evidence revealed by more traditional archaeological materials for the presence during the 9th century of elements of monastic life The vast majority of bioarchaeological evidence from Flixborough provides both direct and indirect evidence of the wealth and social standing of some of the inhabitants as well as a plethora of unique information about agricultural and provisioning practices associated with a major Anglo Saxon estate centre The environmental archaeological record from Flixborough is without doubt one of the most important datasets of the early medieval period and one which will provide a key benchmark for future research into many aspects of early medieval archaeology

wheat chaff have to do with lordship and the market economy What connects ovens in Roman Germany with barley maltings in early medieval Northamptonshire And just how interested were Saxon nuns in cultivating the opium poppy Farming Transformed is the first book to draw together the variegated evidence of pollen sediments charred seeds animal bones watermills corn drying ovens granaries and stockyards on an extensive regional scale The result is an inter disciplinary dataset of unprecedented scope and size which reveals how cereal cultivation boomed and new watermills granaries and ovens were erected to cope with and flaunt the fat of the land As arable farming grew at the expense of pasture sheep and cattle came under closer management and lived longer lives yielding more wool dairy goods and traction power for plowing These and other innovations are found to be concentrated at royal aristocratic and monastic centers placing lordship at the forefront of agricultural innovation and farming as the force behind kingdom formation and economic resurgence in the seventh and eighth centuries *Medieval Warhorse* Oliver H. Creighton, Robert Liddiard, Alan K. Outram, Carly Ameen, Kate Kanne, 2025-02-24 The image of the armoured knight mounted on his charging warhorse is one of the most evocative of the Middle Ages As distinctive symbols of social status horses were central to the medieval aristocratic image and closely bound up with concepts of knighthood and chivalry while as weapons of war bred for size strength and stamina they changed the face of battle Drawing upon new interdisciplinary research this volume presents a fresh perspective on warhorses and medieval horses generally in Britain understood within its wider European context It adopts an integrated approach that covers the full array of evidence for medieval horses from their physical remains bones teeth and DNA equipment and armour through to visual sources such as sculpture and wall paintings and documentary and landscape evidence for the environments in which they were bred and trained Analyses of these sources of information are first presented individually and then integrated and cross compared with the historical record to present a new chronology of horse stature conformation and appearance and to generate new understandings of the changing place of the horse in the medieval world

Gardens in Northern Iberia in the Early Middle Ages Wendy Davies, 2024-11-21 Using archaeological archaeobotanical and written evidence this book explores what gardens meant in northern Spain and northern Portugal in the early middle ages a question asked here for the first time Dealing with a vast area of the Iberian peninsula that lay beyond Muslim al Andalus with great geographical diversity and wide variation in climate this books spans the sixth to tenth centuries showing that gardens might lie beside houses or scattered among arable fields or grouped together in garden zones Gardens are difficult to recognize archaeologically but excavation suggests that many were terraces as it also suggests that indicators of intensive use through fertilization or irrigation or characteristic weed species may be more useful for identifying garden activity than looking for a distinctive shape The strongest indications of garden produce are that fruit was always important and so were legumes and some gardens especially those owned by monasteries may have grown herbs The most striking trend across the tenth century is that peasants sold gardens to monasteries although there are regional

differences Catalonia having a more diverse land market Peasants sold in order to get food and monasteries bought partly to provide garden produce including herbs for expanding communities but partly to use and increase garden space for textile plants flax hemp and dye plants for commercial reasons especially urban supply Gardens were vital for the supply of clothes By scrutinising the logistics of small and medium scale ownership the relations of owners with large scale land holders especially institutions and the ins and outs of those economic and social interactions this wide ranging book adds a new dimension to the environmental history of western Europe in addition to contributing to an understanding of the social economic and cultural history of the period more generally Building Anglo-Saxon England John Blair,2021-10-12

Shortlisted for the Wolfson History Prize A radical rethinking of the Anglo Saxon world that draws on the latest archaeological discoveries This beautifully illustrated book draws on the latest archaeological discoveries to present a radical reappraisal of the Anglo Saxon built environment and its inhabitants John Blair one of the world s leading experts on this transformative era in England s early history explains the origins of towns manor houses and castles in a completely new way and sheds new light on the important functions of buildings and settlements in shaping people s lives during the age of the Venerable Bede and King Alfred Building Anglo Saxon England demonstrates how hundreds of recent excavations enable us to grasp for the first time how regionally diverse the built environment of the Anglo Saxons truly was Blair identifies a zone of eastern England with access to the North Sea whose economy prosperity and timber buildings had more in common with the Low Countries and Scandinavia than the rest of England The origins of villages and their field systems emerge with a new clarity as does the royal administrative organization of the kingdom of Mercia which dominated central England for two centuries Featuring a wealth of color illustrations throughout Building Anglo Saxon England explores how the natural landscape was modified to accommodate human activity and how many settlements secular and religious were laid out with geometrical precision by specialist surveyors The book also shows how the Anglo Saxon love of elegant and intricate decoration is reflected in the construction of the living environment which in some ways was more sophisticated than it would become after the Norman Conquest The Mercian Chronicles Max Adams,2025-02-13 A brilliant recreation of the golden age of the Anglo Saxon kingdom of Mercia its landscapes peoples conflicts power structures and political geography The eighth century has long been a neglected backwater in English history a shadowland between the death of Bede and the triumphs of lfred But before the hegemony of Wessex the kingdom of Mercia spread across a broad swathe of central England was the dynamic heart of a kingship that discovered the means to exercise central political authority for the first time since the Roman empire That authority was used to construct trading networks and markets develop economic and cultural links with the Continent and lay the foundations for a system of co ordinated defence that lfred would reinvent at the end of the ninth century Two kings thelwald 716 757 and Offa 757 796 dominate the political landscape of the rising power of Mercia During their reigns monasteries became powerhouses of royal patronage economic enterprise and trade Offa

constructed his grandiose dyke along the borders of the warlike Welsh kingdoms and more subtly spread his message of political superiority through coinage bearing his image But thelwald and Offa between them built something with an even more substantial legacy a geography of medieval England And they engineered a set of tensions between kingship landholding and church that were to play out dramatically at the dawn of the Viking Age In this the latest of his sequence of histories of Early Medieval Britain Max Adams re connects the worlds of Oswald Bede and Alfred in an absorbing study of the landscape politics and society of a fascinating century The Early Anglo-Saxon Kingdoms of Southern Britain AD 450-650 Sue Harrington, Martin Welch, 2014-07-31 The Tribal Hidage attributed to the 7th century records the named groups and polities of early Anglo Saxon England and the taxation tribute due from their lands and surpluses Whilst providing some indication of relative wealth and its distribution rather little can be deduced from the Hidage concerning the underlying economic and social realities of the communities documented Sue Harrington and the late Martin Welch have adopted a new approach to these issues based on archaeological information from 12 000 burials and 28 000 objects of the period AD 450 650 The nature distribution and spatial relationships of settlement and burial evidence are examined over time against a background of the productive capabilities of the environment in which they are set the availability of raw materials evidence for metalworking and other industrial craft activities and communication and trade routes This has enabled the identification of central areas of wealth that influenced places around them Key within this period was the influence of the Franks who may have driven economic exploitation by building on the pre existing Roman infrastructure of the south east Frankish material culture was as widespread as that of the Kentish people whose wealth is evident in many well furnished graves but more nuanced approaches to wealth distribution are apparent further to the West perhaps due to ongoing interaction with communities who maintained an essentially Romano British way of life
