Analytical Chemistry has made significant progress in the last two decades. Several methods have come to the forefront while some classical methods have been relegated. An attempt has been made in this edition to strike a balance between these two extremes by retaining most significant methods and incorporating some novel techniques. Thus an endeavour has been made to make this book up to date with recent methods. The first part of this book covers the classical volumetric as well as gravimetric methods of analysis. The separation methods are prerequisite for dependable quantitative methods of analysis. Therefore not only solvent extraction separations but also chromatographic methods such as adsorption, partition, ion exchange, exclusion and electrochromatography have been included to keep pace with modern developments. The newly discovered techniques such as ion chromatography, supercritical fluid chromatography and capillary electrophoresis have been included. The next part of the book encompasses the well known spectroscopic methods such as UV, visible, IR, NMR and ESR techniques and also atomic absorption and plasma spectroscopy and molecular luminescence methods. Novel analytical techniques such as Auger, ESCA and photoacoustic spectroscopy of surfaces are also included. The final part of this book covers thermal and radioanalytical methods of analysis. The concluding chapters on electroanalytical techniques include potentiometry, conductometry, coulometry and voltammetry inclusive of all kinds of polarography. The theme of on-line analysis is covered in automated methods of analysis to sustain the interest of the reader. Each chapter is provided with latest references to the monographs in the field. Further to test the comprehension of the subject, each chapter is provided with a large number of solved and unsolved problems. This book should be useful to those readers who have requisite knowledge in chemistry and are majoring in analytical chemistry. It is also useful to practising chemists whose sole aim is to keep abreast with modern developments in the field.
