108 Structure of the Mammalian Heart

Key ideas: Mammals have a four-chambered heart, divided into left and right halves, and acting as a double pump. The heart is the centre of the human circulatory system. It is a hollow, muscular organ made up of four chambers (two atria and two ventricles) that alternately fill and empty of blood, acting as a double pump. The left side pumps the oxygenated blood to the rest of the body, and the right side pumps deoxygenated blood to the lungs. The heart has a double-layered pericardium of connective tissue, which prevents over-distension of the heart and anchors it within the mediastinal compartment of the thoracic cavity.

Human heart structure (simplified, anterior view)

Arrows indicate oxygenated blood in the heart and body. Blood enters the heart from the right atrium. Deoxygenated blood enters the right atrium. Deoxygenated blood enters the right ventricle. Oxygenated blood enters the left atrium. Oxygenated blood enters the left ventricle. Deoxygenated blood enters the right ventricle. Oxygenated blood enters the left ventricle. Deoxygenated blood enters the right ventricle. Oxygenated blood enters the left ventricle.

The heart is not a symmetrical organ. Although the quantity of blood pumped by each side is the same, the volume of the left ventricle is greater than that of the right ventricle. The left ventricle is thicker-walled than the right ventricle.

Right atrium: receives deoxygenated blood in the anterior and posterior venae cavae.
Right ventricle: pumps deoxygenated blood to the lungs via the pulmonary artery.
Left atrium: receives oxygenated blood returning to the heart from the lungs via the pulmonary veins.
Left ventricle: pumps oxygenated blood to the body and back to the heart via the aorta.

Diagram of the heart (simplified). The heart is divided into four chambers: the right atrium, right ventricle, left atrium, and left ventricle. The right atrium receives deoxygenated blood from the superior and inferior vena cavae. The right ventricle pumps deoxygenated blood to the lungs via the pulmonary artery. The left atrium receives oxygenated blood from the pulmonary veins. The left ventricle pumps oxygenated blood to the body via the aorta.

1. In the schematic diagram of the heart below, label the four chambers and the main vessels entering and leaving them. Then complete the diagram of blood flow. Use large coloured circles to mark the direction of flow of the blood.

Labels: Right atrium, Right ventricle, Left atrium, Left ventricle, Superior vena cava, Inferior vena cava, Pulmonary artery, Pulmonary veins, Aorta.
