the 21st century based on the premise that understanding the works of scientists like Hooke Hofmeister Caspary Strasburger
Sachs Schleiden Schwann Mendel Nemec McClintock etc in the context of the latest advances in plant cell biology will help
provide valuable new insights Plants have been an object of study since the roots of the Greek Chinese and Indian cultures
Since the term cell was first coined by Robert Hooke 350 years ago in Micrographia the study of plant cell biology has moved
ahead at a tremendous pace The field of cell biology owes its genesis to physics which through microscopy has been a vital
source for piquing scientists interest in the biology of the cell Today with the technical advances we have made in the field of
optics it is even possible to observe life on a nanoscale From Hooke s observations of cells and his inadvertent discovery of
the cell wall we have since moved forward to engineering plants with modified cell walls Studies on the chloroplast have also
gone from Julius von Sachs experiments with chloroplast to using chloroplast engineering to deliver higher crop yields
Similarly advances in fluorescent microscopy have made it far easier to observe organelles like chloroplast once studied by
Sachs or actin observed by Bohumil Nemec If physics in the form of cell biology has been responsible for one half of this
historical development biochemistry has surely been the other *Train at Home to Work at Home* Michelle
