- 5. **System level** - the study of the structure and function of the systems
- 6. **Organism level** - the study of the structure and function of the whole organism

### CELLS AND TISSUES

Cells are the basic units of structure and function of the body

#### Composition of cellular fluids

Cells are composed of various fluids

1. **Intracellular fluid** - the fluid inside the cell

2. **Extracellular fluid** - the fluid outside the cell

3. **Interstitial fluid** - the fluid between the cells

4. **Transcellular fluid** - the fluid in the transcellular spaces

17. **Other fluids** - the fluids in the other parts of the body

The **epithelium** is the tissue that covers the body. It is composed of cells that are arranged in layers. The cells are connected by tight junctions, which prevent the passage of substances between the cells. The epithelium is the first line of defense against the environment.

#### Connective tissue

Connective tissue is the tissue that connects the other tissues. It is composed of cells and fibers. The cells are responsible for the production and maintenance of the fibers. The fibers are responsible for the strength and elasticity of the tissue.

#### Muscle tissue

Muscle tissue is the tissue that contracts and moves the body. It is composed of cells that are specialized for contraction. The cells are arranged in fibers, which are responsible for the force of contraction.

#### Nervous tissue

Nervous tissue is the tissue that transmits information throughout the body. It is composed of cells that are specialized for the transmission of electrical impulses. The cells are arranged in neurons, which are responsible for the speed and accuracy of the transmission.

### ORGANS

Organs are the structures that perform specific functions in the body

1. **Heart** - the organ that pumps blood throughout the body

2. **Lungs** - the organs that exchange gases between the body and the environment

3. **Stomach** - the organ that digests food and absorbs nutrients

4. **Intestines** - the organs that absorb nutrients and eliminate waste

5. **Kidneys** - the organs that filter blood and remove waste

6. **Bladder** - the organ that stores urine

7. **Uterus** - the organ that carries the developing fetus

8. **Vagina** - the organ that carries the fetus out of the body

15. **Pancreas** - the gland that produces insulin

16. **Gallbladder** - the organ that stores bile

17. **Liver** - the organ that filters blood and produces bile

#### Organ systems

Organ systems are the groups of organs that work together to perform a specific function. The organ systems in the body are:

1. **Cardiovascular system** - the system that pumps blood throughout the body

2. **Respiratory system** - the system that exchanges gases between the body and the environment

3. **Digestive system** - the system that digests food and absorbs nutrients

4. **Excretory system** - the system that eliminates waste from the body

5. **Reproductive system** - the system that produces offspring

6. **Endocrine system** - the system that produces hormones

7. **Immune system** - the system that defends the body against disease

8. **Nervous system** - the system that transmits information throughout the body

9. **Musculoskeletal system** - the system that moves the body

10. **Integumentary system** - the system that covers the body

11. **Sensory system** - the system that receives information from the environment
