Systems E. E. Bernard, 2012-12-06 When the present symposium was first conceived it was decided that more emphasis be given to contributions from biological laboratories than has typically appeared in previous bionics meetings Accordingly most of the invited speakers are biologists in the broad sense of representing some area of the life sciences Likewise many of the submitted papers eventually chosen by the technical committee were from the life sciences rather than the physical sciences or mathematics In this way it was hoped that a greater direct interest in the technological problems of bionics might be stimulated among biologists upon whose work much of the success of bionics necessarily lies Because of the wide interdisciplinary span of the papers it was necessary to impose some artificial organization upon them specifically for continuity in the transactions We elected to put the biological papers first followed by those which deal with reasonably specific models and reserve to the last those papers reporting models which are more general in nature The editorial function was kept to a minimum with no major alterations of content and few of style being exercised Several of the papers delivered at the symposium required a longer format for clarity and are included here in expanded versions Assistance in the preparation of this volume was received from the National Institute of Neurologic Diseases and Blindness Grant number B 3896
