

Graphing and Analyzing Scientific Data

Graphing is an important procedure used by scientist to display the data that is collected during a controlled experiment. There are three main types of graphs:

Pie/circle graphs: Used to show parts of a whole.

Bar graphs: Used to compare amounts.

Line graphs: Use to show the change of one piece of information as it relates to another change.

Both bar and line graphs have an "X" axis (horizontal) and a "Y" axis (vertical).

Parts of a Graph:

Title: Summarizes information being represented in ANY graph.

Independent Variable: The variable that is controlled by the experimenter, such as, time, dates, depth, and temperature. This is placed on the X axis.

Dependent Variable: The variable that is directly affected by the I.V. It is the result of what happens as time, dates, depth and temperature are changed. This is placed on the Y axis.

Scales for each Variable: In constructing a graph, one needs to know where to plot the points representing the data. In order to do this a scale must be employed to include all the data points.

A. Graph the following information in a **BAR** graph. Label and number the x and y-axis appropriately.

Month	# of deer

ADHD and Anxiety: Causality Sequences Through a Biopsychosocial Model Hongbao Cao, Shaolei Teng, Sha Liu, 2025-08-18 ADHD Attention Deficit Hyperactivity Disorder and anxiety disorders are two of the most common psychiatric conditions often co existing in the same individuals The relationship between these disorders is complex and multifactorial in nature The biopsychosocial model postulates that biological psychological and social factors all play a significant role in human functioning in the context of disease or illness which includes these disorders Evidence suggests that ADHD can predispose individuals to anxiety and vice versa However the causality sequences as explored in the literature remains limited It is possible that ADHD symptomology causes anxiety or the genetics behind ADHD causes anxiety symptoms Current research has adopted a more complex nuanced understanding of both disorders acknowledging the unique interactions of biological psychological and social factors and large datasets e g Dunedin datasets may help with developing a stronger causality sequence It s also noteworthy that severe anxiety can look like ADHD but the treatment is totally different as ADHD meds Stimulants can make anxiety worse
