

Graphing and Analyzing Scientific Data

Graphing is an important procedure used by scientist to display the data that is collected during a controlled experiment. There are three main types of graphs:

Pie/circle graphs: Used to show parts of a whole.

Bar graphs: Used to compare amounts.

Line graphs: Use to show the change of one piece of information as it relates to another change.

Both bar and line graphs have an "X" axis (horizontal) and a "Y" axis (vertical).

Parts of a Graph:

Title: Summarizes information being represented in ANY graph.

Independent Variable: The variable that is controlled by the experimenter, such as, time, dates, depth, and temperature. This is placed on the X axis.

Dependent Variable: The variable that is directly affected by the I.V. It is the result of what happens as time, dates, depth and temperature are changed. This is placed on the Y axis.

Scales for each Variable: In constructing a graph, one needs to know where to plot the points representing the data. In order to do this a scale must be employed to include all the data points.

A. Graph the following information in a **BAR** graph. Label and number the x and y-axis appropriately.

Month	# of deer

ADHD and Anxiety: Causality Sequences Through a Biopsychosocial Model Hongbao Cao, Shaolei Teng, Sha Liu, 2025-08-18 ADHD Attention Deficit Hyperactivity Disorder and anxiety disorders are two of the most common psychiatric conditions often co-existing in the same individuals The relationship between these disorders is complex and multifactorial in nature The biopsychosocial model postulates that biological psychological and social factors all play a significant role in human functioning in the context of disease or illness which includes these disorders Evidence suggests that ADHD can predispose individuals to anxiety and vice versa However the causality sequences as explored in the literature remains limited It is possible that ADHD symptomology causes anxiety or the genetics behind ADHD causes anxiety symptoms Current research has adopted a more complex nuanced understanding of both disorders acknowledging the unique interactions of biological psychological and social factors and large datasets e.g. Dunedin datasets may help with developing a stronger causality sequence It is also noteworthy that severe anxiety can look like ADHD but the treatment is totally different as ADHD meds Stimulants can make anxiety worse

Evolution in Hawaii National Academy of Sciences, Steve Olson, 2004-03-10 As both individuals and societies we are making decisions today that will have profound consequences for future generations From preserving Earth's plants and animals to altering our use of fossil fuels none of these decisions can be made wisely without a thorough understanding of life's history on our planet through biological evolution Companion to the best selling title Teaching About

Evolution and the Nature of Science Evolution in Hawaii examines evolution and the nature of science by looking at a specific part of the world Tracing the evolutionary pathways in Hawaii we are able to draw powerful conclusions about evolution s occurrence mechanisms and courses This practical book has been specifically designed to give teachers and their students an opportunity to gain a deeper understanding of evolution using exercises with real genetic data to explore and investigate speciation and the probable order in which speciation occurred based on the ages of the Hawaiian Islands By focusing on one set of islands this book illuminates the general principles of evolutionary biology and demonstrate how ongoing research will continue to expand our knowledge of the natural world **Cereal Genetic Resources in Europe** ,2005 *Animal Genetic Resources: an International Journal* Food and Agriculture Organization (FAO),2013-07-17

Witness Jay Aronson,2007-10-11 When DNA profiling was first introduced into the American legal system in 1987 it was heralded as a technology that would revolutionize law enforcement As an investigative tool it has lived up to much of this hype it is regularly used to track down unknown criminals put murderers and rapists behind bars and exonerate the innocent Yet this promise took ten turbulent years to be fulfilled In Genetic Witness Jay D Aronson uncovers the dramatic early history of DNA profiling that has been obscured by the technique s recent success He demonstrates that robust quality control and quality assurance measures were initially nonexistent interpretation of test results was based more on assumption than empirical evidence and the technique was susceptible to error at every stage Most of these issues came to light only through defense challenges to what prosecutors claimed to be an infallible technology Although this process was fraught with controversy inefficiency and personal antagonism the quality of DNA evidence improved dramatically as a result Aronson argues however that the dream of a perfect identification technology remains unrealized **Functional Characterization**
