Analyzing Urban Poverty Gis For The Developing World:

Analyzing Urban Poverty Rosario C. Giusti de Pérez, Ramon A. Pérez, 2008 Squatter developments house more than one third of the urban population in developing countries This work shows how geographic information systems GIS can be used to improve quality of life in poor urban areas **Urban Development - Challenges and Progress** Dr. Sukanta Sarkar, 2014

Analyzing Urban Poverty Judy Baker, 2004 In recent years an extensive body of literature has emerged on the definition measurement and analysis of poverty Much of this literature focuses on analyzing poverty at the national level or spatial disaggregation by general categories of urban or rural areas with adjustments made for regional price differentials Yet for an individual city attempting to tackle the problems of urban poverty this level of aggregation is not sufficient for answering specific questions such as where the poor are located in the city whether there are differences between poor areas if access to services varies by subgroup whether specific programs are reaching the poorest and how to design effective poverty reduction programs and policies Answering these questions is critical particularly for large sprawling cities with highly diverse populations and growing problems of urban poverty Understanding urban poverty presents a set of issues distinct from general poverty analysis and thus may require additional tools and techniques Baker and Schuler summarize the main issues in conducting urban poverty analysis with a focus on presenting a sample of case studies from urban areas that were implemented by a number of different agencies using a range of analytical approaches for studying urban poverty Specific conclusions regarding design and analysis data timing cost and implementation issues are discussed This paper a product of the Urban Unit Transport and Urban Development Department is part of a larger effort in the department to promote strategies for reducing urban poverty World Bank web site **Open Cities | Open Data** Scott Hawken, Hoon Han, Chris Pettit, 2019-09-26 Today the world's largest economies and corporations trade in data and its products to generate value in new disruptive markets Within these markets vast streams of data are often inaccessible or untapped and controlled by powerful monopolies Counter to this exclusive use of data is a promising world wide open data movement promoting freely accessible information to share reuse and redistribute The provision and application of open data has enormous potential to transform exclusive technocratic smart cities into inclusive and responsive open cities This book argues that those who contribute urban data should benefit from its production Like the city itself the information landscape is a public asset produced through collective effort attention and resources People produce data through their engagement with the city creating digital footprints through social media mobility applications and city sensors By opening up data there is potential to generate greater value by supporting unforeseen collaborations spontaneous urban innovations and solutions and improved decision making insights Yet achieving more open cities is made challenging by conflicting desires for urban anonymity sociability privacy and transparency This book engages with these issues through a variety of critical perspectives and presents strategies tools and case studies that enable this transformation Local Governance and Poverty in

Developing Nations Nicky Pouw, Isa Baud, 2013-06-17 This volume examines the persistence of poverty both rural and urban in developing countries and the response of local governments to the problem exploring the roles of governments NGOs and CSOs in national and sub national agenda setting policy making and poverty reduction strategies It brings together a rich variety of in depth country and international studies based on a combination of original data collection and extensive research experience in developing countries Taking a bottom up and multi dimensional perspective of poverty and well being as the starting point the authors develop a convincing set of arguments for putting the priorities of poor people first on any development agenda thus carving out an undisputable role for local governance in interplay with higher up governance actors and institutions
