Systems Analysis and Simulation in Ecology Bernard C. Patten,2013-09-11 Systems Analysis and Simulation in Ecology Volume IV continues the organization begun in Volume III to document a meeting Modeling and Analysis of Ecosystems held at the University of Georgia on 1 3 March 1973 Several chapters are considerably expanded over their original concept and several others are included which were not part of the symposium The book is organized into five parts Part I contains chapters on

estuarine marine ecosystems Part II presents models of several terrestrial ecosystems Part III has chapters devoted to human aspects of ecology Part IV considers special problems of ecosystem modeling namely linear versus nonlinear models aggregation and validation Part V the most extensive section describes theory in ecosystem analysis The book's chapters demonstrate the current scope of systems ecology its past and present emphasis on parts and mechanisms in simulation modeling and its movement toward systems analysis and new more formal consideration of wholes in theory They make clear that although the systems approach is young in ecology it has substantially enriched the science both methodologically and conceptually

Potentials and Limitations of Ecosystem Analysis Ernst-Detlef Schulze, Helmut Zwölfer, 2012-12-06 The identification of inputs and outputs is the first and probably most important step in testing and analyzing complex systems Following accepted natural laws such as the conservation of mass and the principle of electroneutrality the input output analysis of the system be it steady or in connection with perturbations will reveal the status dynamic will identify whether changes are reversible or irreversible and whether changing the input will cause a hysteresis response Moreover measurements of input and output fluxes can indicate the storage capacity of a system its resilience to buffer or amplify variations of the external input and it can identify structural changes Therefore to a certain extent the input output analysis can facilitate predictions about the ecosystem stability The measurement of fluxes and the determination of inputs and outputs of eco systems are in many aspects analogous to measurements done by engineers when testing an electronic apparatus The first step is the measurement of the input output properties of the instrument as a whole or of various circuit boards and the comparison of these with the expected variations of the original design Varying input and output can give valuable information about the stability and the regulatory properties of the device Nevertheless only the circuit as an entity has specific properties which cannot be anticipated if the individual components are investigated regardless of their position Also the instrument as a whole will have different input output properties than its subcircuits

Handbook of Research on the Conservation and Restoration of Tropical Dry Forests Bhadouria, Rahul, Tripathi, Sachchidanand, Srivastava, Pratap, Singh, Pardeep, 2019-09-27 Tropical dry forests are the most exploited and endangered ecosystems in the world A combination of climatic and human factors often reduce these forests to patches of dry scrubs or savannas Because these ecosystems experience a more arduous and less anticipated environment they are more prone to

environmental stress as plant communities are developed Therefore urgent research is necessary to understand both the detrimental issues and problem solving approaches to conserving these important forests The Handbook of Research on the Conservation and Restoration of Tropical Dry Forests is a pivotal reference source that combines theory and practice on the current trends and issues in this important ecological subject and discusses future challenges towards conservation strategies of these tropical dry forests While highlighting topics such as forest management natural regeneration and silviculture this publication examines the anthropogenic impacts on tropical dry forests and the necessity to rebuild their ecosystems This book is ideally designed for state forest agency professionals resource managers non governmental organization agents ecologists botanists environmentalists students and researchers seeking current research on the threats to these forests

Water and Carbon Dynamics, Ecosystem Stability of Forest and Grassland in Response to Climate Change Xiaoming Kang, Shoujia Sun, Fenghui Yuan, Xianjin Zhu, Xiaojuan Tong, Hui Huang, 2024-04-15 Forest and grassland ecosystems are the most important carbon sinks in terrestrial ecosystems They can maintain or enhance carbon stocks and sinks in biomass and play vital roles in mitigating climate change China is taking action to achieve its carbon peak and carbon neutral targets Climate change particularly the increase in the frequency severity and extent of drought will affect the stability of the forest and grassland How forests and grassland mitigate and adapt to climate change is still a challenge Exploring the response of the forest and grassland to extreme climate events contributes to improving vegetation quality and enhancing the ability to respond to climate change

The Role of Microbial Communities in Tropical Ecosystems Silvia Pajares, Brendan J.M. Bohannon, Valeria Souza, 2017-01-13 Tropical ecosystems are different in important ways from those of temperate regions They are a major reservoir of plant and animal biodiversity and play important roles in global climate regulation and biogeochemical cycling They are also under great threat due to the conversion of tropical ecosystems to other uses Thus in the context of global change it is crucial to understand how environmental factors biogeographic patterns and land use changes interact to influence the structure and function of microbial communities in these ecosystems The contributions to this Research Topic showcase the current knowledge regarding microbial ecology in tropical ecosystems identify many challenges and questions that remain to be addressed and open up new horizons in our understanding of the environmental and anthropological factors controlling microbial communities in these important ecosystems
