NASA Technical Note ,1975 **Barycentric Calculus in Euclidean and Hyperbolic Geometry** Abraham A.

Ungar,2010 The word barycentric is derived from the Greek word barys heavy and refers to center of gravity Barycentric calculus is a method of treating geometry by considering a point as the center of gravity of certain other points to which weights are ascribed Hence in particular barycentric calculus provides excellent insight into triangle centers This unique book on barycentric calculus in Euclidean and hyperbolic geometry provides an introduction to the fascinating and beautiful subject of novel triangle centers in hyperbolic geometry along with analogies they share with familiar triangle centers in Euclidean geometry As such the book uncovers magnificent unifying notions that Euclidean and hyperbolic triangle centers share In his earlier books the author adopted Cartesian coordinates trigonometry and vector algebra for use in hyperbolic geometry that is fully analogous to the common use of Cartesian coordinates trigonometry and vector algebra in Euclidean geometry As a result powerful tools that are commonly available in Euclidean geometry became available in hyperbolic geometry as well enabling one to explore hyperbolic geometry in novel ways In particular this new book establishes hyperbolic barycentric coordinates that are used to determine various hyperbolic triangle centers just as Euclidean barycentric coordinates are commonly used to determine various Euclidean triangle centers The hunt for Euclidean triangle centers is an old tradition in Euclidean geometry resulting in a repertoire of more than three thousand triangle centers that are known by their barycentric coordinate representations The aim of this book is to initiate a fully analogous hunt for hyperbolic triangle centers that will broaden the repertoire of hyperbolic triangle centers provided here **Airman's Guide**

,1948 Classical and Quantic Periodic Motions of Multiply Polarized Spin-Particles Abbas Bahri,1997-11-28 The author of this volume defines a diffusion flow for a variational problem lacking completeness related to the geometry of a contact form α and a vector field u in its kernel He analyzes the ends of the flow lines and finds them to be of two types one involving periodic orbits of the Reeb Hamiltonian vector field x and the other where asymptotes occur In the most general case these turn out to be periodic motions for x up to quantic jumps of a very special type along u He shows that the mathematical results and the physical interpretation fit and provide new points of view useful in the foundations of quantum mechanics
