

Introduction

Tomato production in Kenya has increased considerably in the recent past with greenhouse production being adopted in many areas. The tomato (*Lycopersicon esculentum*) is popular with both small and large scale farmers for its edible fruits both for export and local consumption.

Monsanto hybrids rank highly amongst the reputable brands associated with tomato production in the country.

Tomato Anna F1 (Hybrid Tomato Anna) is an indeterminate hybrid bred and developed by the Monsanto Vegetable Seeds division for greenhouse production.

Tomato Anna F1 - Hybrid Tomato Anna

Features of Anna F1

■ It is a fresh market variety that does very well in the greenhouse, but can also do well in open field.

■ The fruit is deep red, firm and oval shaped.

■ Tomato Anna F1 has High Resistance to *Alternaria* stem canker, *Verticillium*, *Fusarium* wilt as well as nematodes.

■ Maturity is 75 days from transplanting.

■ The yield is approximately 74tons/acre (80-90kg/m²) with an average of 35 kg per plant in its life span.

Growing Instructions

For a successful crop of Anna F1 tomatoes the grower needs to diligently observe certain practices at each stage:

1. Field Selection

- Consider previous planted crop. As general rule, farmers should observe at least a 3-season break from tomato, pepper, potato or any other crop from the solanaceous family. This is done to avoid disease cycles and ensure less cost in disease management.
- Check the irrigation water quality. Excess sodium and fluoride may affect proper plant growth.
- Check water availability particularly if you intend to use irrigation.
- Ideally, the land should be gentle sloping to facilitate drainage.

2. Soil environment

- Tomatoes can grow in a variety of soil types; they do best in well-drained, deep, uniform clay or silty loams. The soil should be loose, deep and of correct structure because tomato Anna F1 has a root system of more than 60 cm depth.
- The optimum pH for tomato production is between 6-7.5.
- In coming up with a fertilizer program the grower can carry out a soil analysis.

3. Land preparation

- Proper land preparation is necessary to loosen soil and break hard pans or compacted fields. During land preparation, 8 tons of farm-yard manure per acre can be incorporated into the soil to improve its structure, this will in turn improve soil aeration and water penetration.
- In nematode infested areas, fumigation can be done with registered products.
- In soils whose pH is low; lime can be applied to raise the pH. For alkaline soils, gypsum can be used to reduce soil pH; it is also handy in sodium-level reduction.
- Planting on beds is recommended for low-lying areas with high run-off. Raise the soil 15cm high with walkways of 30cm between the beds. Lay drip lines with the nozzles facing up.

4. Seed requirement

- Tomato Anna F1 is sold in seed counts and is available in leading stockists in all the regions of the country.
- In calculating seed requirement, the amount of seed will be determined by the spacing that will be used. A plant density of 3 plants per metre squared is recommended for most regions. The grower should plant about 15 percent more seeds in their nursery to cater for the seedlings that will be used for gapping.

5. Nursery management

- Soil nursery method as well as trays can be used for growing seedlings. In the soil
