Linguistics and Language Behavior Abstracts, 2008 *Social Movements, 1768-2008* Charles Tilly, Lesley J. Wood, 2020-04-30 This expanded second edition of Tilly's widely acclaimed 2004 book brings this analytical history of social movements fully up to date. Tilly and Wood cover such recent topics as immigrants' rights, new media technologies, anti-Olympic organizing in China, new mobilizations against the Iraq War, and the role of bloggers and Facebook in social movement activities. Coverage of these and other recent events serves to expand further the book's seminal theorizing and conceptualization of how social movements grew from eighteenth-century Europe to eventually fuel popular movements all over the world.

Animal Creativity and Innovation, 2015-10-29 Animal Creativity and Innovation explores theories and research on animal innovation and creativity, comparing and contrasting it with theory and research on human creativity and innovation. In doing so, it encompasses findings from psychology, biology, neuroscience, engineering, business, ecology, and education. The book includes examples of animal innovation in parrots, dogs, marine mammals, insects, and primates, exploring parallels from creative play in children. The book defines creativity, differentiating it from play, and looks at evolutionary models and neurological constructs. The book further explores applied aspects of animal innovation and creativity, including tool use and group dynamics, as well as barriers to creativity. The final chapters look into how creative behavior may be taught or trained. Each chapter is followed by a commentary for integration of thoughts and ideas between animal and human research, behavioral and cognitive research, and theory and observation in real life. Compares theory and research on animal and human creativity. Defines and differentiates creativity from play. Reviews applied creativity in tool use and social dynamics. Includes examples of animal creativity in multiple species.

Evolution of Primate Social Cognition Laura Desirée Di Paolo, Fabio Di Vincenzo, Francesca De Petrillo, 2018-09-14 This interdisciplinary volume brings together expert researchers coming from primatology, anthropology, ethology, philosophy of cognitive sciences, neurophysiology, mathematics, and psychology to discuss both the foundations of non-human primate and human social cognition, as well as the means that currently exist to study the various facets of social cognition. The first part focusses on various aspects of social cognition across primates, from the relationship between food and social behaviour to the connection with empathy and communication, offering a multitude of innovative approaches that range from field studies to philosophy. The second part details the various epistemic and methodological means that exist to study social cognition, in particular how to ascertain the proximal and ultimate mechanisms of social cognition through experimental modelling and field studies. In the final part, the mechanisms of cultural transmission in primate and human societies are investigated, and special attention is given to how the evolution of cognitive capacities underlies primates' abilities to use and manufacture tools, and how this in turn influences their social ecology. A must-read for both young scholars as well as established researchers.

The Conscious Brain Jesse J. Prinz, 2012-09-13 The problem of consciousness continues to be a subject of great debate in cognitive science Synthesizing decades of research *The Conscious Brain* advances a new theory of the psychological and neurophysiological correlates of conscious experience Prinz's account of consciousness makes two main claims first consciousness always arises at a particular stage of perceptual processing the intermediate level and second consciousness depends on attention Attention changes the flow of information allowing perceptual information to access memory systems Neurobiologically this change in flow depends on synchronized neural firing Neural synchrony is also implicated in the unity of consciousness and in the temporal duration of experience Prinz also explores the limits of consciousness We have no direct experience of our thoughts no experience of motor commands and no experience of a conscious self All consciousness is perceptual and it functions to make perceptual information available to systems that allows for flexible behavior Prinz concludes by discussing prevailing philosophical puzzles He provides a neuroscientifically grounded response to the leading argument for dualism and argues that materialists need not choose between functional and neurobiological approaches but can instead combine these into neurofunctional response to the mind body problem *The Conscious Brain* brings neuroscientific evidence to bear on enduring philosophical questions while also surveying challenging and extending philosophical and scientific theories of consciousness All readers interested in the nature of consciousness will find Prinz's work of great interest

Creating Language Morten H. Christiansen, Nick Chater, 2018-04-20 A work that reveals the profound links between the evolution acquisition and processing of language and proposes a new integrative framework for the language sciences Language is a hallmark of the human species the flexibility and unbounded expressivity of our linguistic abilities is unique in the biological world In this book Morten Christiansen and Nick Chater argue that to

understand this astonishing phenomenon we must consider how language is created moment by moment in the generation and understanding of individual utterances year by year as new language learners acquire language skills and generation by generation as languages change split and fuse through the processes of cultural evolution Christiansen and Chater propose a revolutionary new framework for understanding the evolution acquisition and processing of language offering an integrated theory of how language creation is intertwined across these multiple timescales Christiansen and Chater argue that mainstream generative approaches to language do not provide compelling accounts of language evolution acquisition and processing Their own account draws on important developments from across the language sciences including statistical natural language processing learnability theory computational modeling and psycholinguistic experiments with children and adults Christiansen and Chater also consider some of the major implications of their theoretical approach for our understanding of how language works offering alternative accounts of specific aspects of language including the structure of the vocabulary the importance of experience in language processing and the nature of recursive linguistic structure
