

RAT DISSECTION PRE LAB

Introduction:

The rat is a vertebrate, which means that many aspects of its structural organization are common with all other vertebrates. In a way, studying the rat is like studying a human.

As the leading theme of this lab, remind yourself: *for every structure observed in the rat, there is an equivalent structure in your own body - what is the structure and where is it located.*

As the second leading theme, pay particular attention to the relationships among organs and groups of organs. Structural parts are not "just there" in random locations. Their specific layout within the body contributes to making certain functions possible. Therefore, for every structure seen, you should determine the following:

- What organ system it belongs to
- How it is connected with other components
- Its general/specific function

Quantitative Functional Brain Imaging with Positron Emission Tomography Richard E. Carson, Peter Herscovitch, Margaret E. Daube-Witherspoon, 1998-09-08 This book presents the latest scientific developments in the field of positron emission tomography PET dealing with data acquisition image processing applications statistical analysis tracer development parameter estimation and kinetic modeling It covers improved methodology and the application of existing techniques to new areas The text also describes new approaches in scanner design and image processing and the latest techniques for modeling and statistical analyses This volume will be a useful reference for the active brain PET scientist as well as a valuable introduction for students and researchers who wish to take advantage of the capabilities of PET to study the normal and diseased brain Authored by international authorities in PET Provides the latest up to date techniques and applications Covers all fundamental disciplines of PET in one volume A comprehensive resource for students clinicians and new PET researchers **Laboratory Manual for Human Biology** Bert Atsma, Sandra Hsu, 2002 A variety of approximately 30 lab activities to complete any human biology course Current Trends of Insect Physiology and Population Dynamics: Modeling Insect Phenology, Demography, and Circadian Rhythms in Variable Environments Petros T. Damos, Sibylle C. Stoeckli, Alexandros Rigas, 2018-06-12 The current eBook collection includes substantial scientific work in describing how insect species are responding to abiotic factors and recent climatic trends on the basis of insect physiology and population dynamics The contributions can be broadly split into four chapters the first chapter focuses on the function of environmental and mostly temperature driven models to identify the seasonal emergence and population dynamics of insects including some important pests The second chapter provides additional examples on how such models can be used to simulate the effect of climate change on insect phenology and population dynamics The third chapter focuses on describing the effects of nutrition gene expression and phototaxis in relation to insect demography growth and development whilst the fourth chapter provides a short description on the functioning of circadian systems as well as on the evolutionary dynamics of circadian clocks
