

Unit 1: Analytic Geometry in Calculus

Summary

Analytic geometry is a branch of mathematics that enables us to see the relationships between geometrical shapes and their mathematical representations, using coordinate systems. We begin Lesson 1.1 by considering the familiar—the Cartesian coordinate system—which describes space using a two-dimensional, rectangular coordinate system. Here, we examine how curves within the plane can be represented using parametric equations, and then we examine how our understanding of calculus is modified in this context.

In Lesson 1.2 we turn our attention to another coordinate system: the polar coordinate system. We study the properties of geometrical shapes defined by polar coordinates, as well as the relationship between the polar coordinate system and the Cartesian system.

We finish with Lesson 1.3 by studying geometrical shapes known as conic sections—their formulas, graphical representations and properties.

Lesson 1.1 Parametric Curves

Learning Objectives

When you have completed this lesson, you will be able to

- represent curves with parametric equations.
- generate a function or implicit function for a parameterized curve.
- calculate tangents to parametric curves.
- calculate areas under parametric curves.
- calculate arc lengths of parametric curves.
- calculate surface areas defined by rotation of a parametric curve about an axis.

Activities

Reading: Chapter 10, Section 10.1: “Curves Defined by Parametric Equations”

Note: Be sure to read through all the examples.

Explore It: Section 10.1, including the “Explore & Test” exercises

- “Explore it: Parametric Curves”
- “Explore it: Families of Cycloids”

Lab: Lab 10.1: “Parametric Equations”

seven years of Standards based mathematics curricula and instruction in middle school and high school It monitored students mathematical achievement beliefs and attitudes for four years of high school and one year after graduation Prior to the study many of the teachers had one or more years of experience teaching the Standards based curriculum and or professional development focusing on how to implement the curriculum well In the study variations in levels of implementation of the curriculum are described and related to student outcomes and teacher behavior variables Item data and all unpublished testing instruments from this study are available at www.wmich.edu/cmp for use as a baseline of instruments and data for future curriculum evaluators or Core Plus Mathematics users who may wish to compare results of new groups of students to those in the present study on common tests or surveys Taken together this volume the supplement at the CPMP Web site and the first edition Core Plus Mathematics curriculum materials samples of which are also available at the Web site serve as a fairly complete description of the nature and impact of an exemplar of first edition NSF funded Standards based high school mathematics curricula as it existed and was implemented with all students in three schools around the turn of the 21st century

Design Methodologies for Space Transportation Systems Walter Edward Hammond, 2001 Annotation
Design Methodologies for Space Transportation Systems is a sequel to the author's earlier text Space Transportation A Systems Approach to Analysis and Design Both texts represent the most comprehensive exposition of the existing knowledge and practice in the design and project management of space transportation systems and they reflect a wealth of experience by the author with the design and management of space systems The text discusses new conceptual changes in the design philosophy away from multistage expendable vehicles to winged reusable launch vehicles and presents an overview of the systems engineering and vehicle design process as well as systems trades and analysis Individual chapters are devoted to specific disciplines such as aerodynamics aerothermal analysis structures materials propulsion flight mechanics and trajectories avionics and computers and control systems The final chapters deal with human factors payload launch and mission operations safety and mission assurance The two texts by the author provide a valuable source of information for the space transportation community of designers operators and managers A companion CD ROM succinctly packages some oversized figures and tables resources for systems engineering and launch ranges and a compendium of software programs The computer programs include the USAF AIRPLANE AND MISSILE DATCOM CODES with extensive documentation COSTMODL for software costing OPGUID launch vehicle trajectory generator SUPERFLO a series of 11 programs intended for solving compressible flow problems in ducts and pipes found in industrial facilities and a wealth of Microsoft Excel spreadsheet programs covering the disciplines of statistics vehicle trajectories propulsion performance math utilities
