Clinical Atlas of Bone SPECT/CT Tim Van den Wyngaert, Gopinath Gnanasegaran, Klaus Strobel, 2024-02-24 This clinical atlas is a comprehensive reference work on bone and joint disorders that can be characterized and assessed with hybrid bone SPECT CT. It is structured according to the major joints and regions of the skeletal system including spine, shoulder and elbow, hand and wrist, pelvis and hip, knee and foot and ankle. For each region, the annotated normal X-ray and cross-sectional anatomy is presented, followed by a general introduction to the most common pathologies and frequent surgical procedures. Optimal bone SPECT CT acquisition parameters are summarized and pre and postoperative conditions are then discussed with the aid of informative clinical case vignettes featuring not only bone SPECT CT images but also correlative findings on other imaging modalities. For every case, teaching points highlighting need to know findings and common pitfalls are presented. The book concludes with two dedicated chapters covering bone SPECT CT imaging in sports injuries and oncology. Featuring many high quality illustrations, *Clinical Atlas of Bone SPECT CT* will be an invaluable resource for all nuclear medicine physicians. It is published as part of the SpringerReference program which delivers access to living editions constantly updated through a dynamic peer review publishing process.

Essential Musculoskeletal MRI E-Book Michelle Anna Wessely, Martin Ferrier Young, 2011-02-05 *Essential Musculoskeletal MRI* is a clinically based manual written by experts in both musculoskeletal MRI and musculoskeletal medicine. It explains when and why patients should be referred for this type of imaging and is an essential purchase for any student or clinician wishing to hone their MRI reading skills and to interpret their findings in conjunction with patient symptoms. The book assumes no previous knowledge of diagnostic imaging and covers the appearance of normal anatomy under MRI as well as the radiological features of the most commonly encountered regional pathologies with emphasis on those with musculoskeletal relevance. The content is regionally organised rather than driven by pathology and the focus is clearly on clinical application. Worked clinical examples develop diagnostic thinking and the numerous images help clinicians to recognise patterns.
