Müller's Lab Laura Otis, 2007-04-05 Many structures in the human body are named after Johannes Muller one of the most respected anatomists and physiologists of the 19th century Muller taught many of the leading scientists of his age many of whom would go on to make trail blazing discoveries of their own Among them were Theodor Schwann who demonstrated that all animals are made of cells Hermann Helmholtz who measured the velocity of nerve impulses and Rudolf Virchow who convinced doctors to think of disease at the cellular level This book tells Muller s story by interweaving it with those of seven of his most famous students Muller suffered from

depression and insomnia at the same time as he was doing his most important scientific work and may have committed suicide at age 56 Like Muller his most prominent students faced personal and social challenges as they practiced cutting edge science Virchow was fired for his political activism Jakob Henle was jailed for membership in a dueling society and Robert Remak was barred from Prussian universities for refusing to renounce his Orthodox Judaism By recounting these stories Muller's Lab explores the ways in which personal life can affect scientists professional choices and consequently affect the great discoveries they make Oxford Handbook of Clinical and Laboratory Investigation Drew Provan, 2005 With new material illustrations and updated chapters the new edition of this enormously successful book provides guidance on the best use of the many tests and investigations currently available It emphasizes which tests are of value when tests are not likely to be helpful and explains likely pitfalls in the interpretation of results Throughout the book emphasises the need to avoid over investigation Starting off with a patient oriented approach to investigation the book describes key symptoms and signs along with tests that may be of value in reaching a diagnosis The remainder of the book is specialty centered and provides a comprehensive review of all available tests within a given subject BOOK JACKET *Title Announcement Bulletin*, 1957 *Routledge Revivals: Art and Artifact in Laboratory Science (1985)* Michael Lynch, 2017-09-20 First published in 1985 this book provides a descriptive study of social activities in a neurosciences laboratory Based on fieldwork conducted by the author in the laboratory during 1975 and 1976 and taking an ethnomethodological approach it focuses on the phenomenon of the social accomplishment of natural scientific order Through the examination of shop work and shop talk in this environment it identifies an analyzable social basis in the local production of accounts of natural objects in laboratory research This work will be of interest to students and scholars of ethnomethodology and sociology **Sourcebook of Models for Biomedical Research** P.
