Fredlund,Hendry Rahardjo,1993-09-06 The principles and concepts for unsaturated soils are developed as extensions of saturated soils Addresses problems where soils have a matric suction or where pore water pressure is negative Covers theory measurement and use of the fundamental properties of unsaturated soils permeability shear strength and volume change Includes a significant amount of case studies **Social Change in Village India** Sachchidananda,1988 *Contested Karoo: Interdisciplinary perspectives on change and continuity in South Africa's drylands* Cherryl Walker,M Timm Hoffman,2024-05-15 This inter disciplinary collection explores significant land use changes in South Africa s semi arid Karoo region and their implications for social justice and the environment across different scales It brings together recent scholarship by established and younger researchers in both the social and the natural sciences to examine the ways in which the Karoo is being reconfigured as a new resource frontier and the tensions and contestations that result Along with ongoing mining major investments in astronomy notably the Square Kilometre Array radio telescope in renewable and non renewable sources of energy solar wind potential shale gas mining in biodiversity conservation and commercial game farming are reshaping land use and authority in this vast and long marginalised area While promising significant benefits to society at large these developments are built on older histories of dispossession and extractivism histories that many Karoo residents fear are being reproduced in new forms today Collectively these dynamics place this unique region at the centre of national

and global concerns around climate change the politics of knowledge production the conservation of threatened biodiversity and the meaning and possibility of sustainable development These issues are explored through a series of case studies of selected developments complemented by chapters providing more historical context and general overviews While challenging perceptions of this region as a peripheral wasteland this collection raises conceptual and policy questions that resonate far beyond the Karoo itself It also highlights the importance of interdisciplinary collaboration in research aimed not only at understanding but also at responding appropriately to the mounting challenges of our time

Geographic Approaches to Climate Change and Mitigation: Urban and Rural Perspectives (Volume 1) Pir Mohammad, Shahfahad, Jesús Rodrigo

Comino, Abraham R. Matamanda, 2025-10-04 This book provides an exploration of the geographic dimensions of climate change focusing on both urban and rural perspectives By examining the unique challenges and opportunities that arise in different environments it offers a balanced and holistic approach to climate mitigation It demonstrates how geographical analysis may guide and strengthen efforts to mitigate climate change by bringing together a variety of tactics case studies and research findings from around the world The main topics covered include urban planning and climate resilience rural land use and sustainability the role of geographic information systems GIS in climate modeling and the socio economic impacts of climate policies Special emphasis is placed on the interconnectedness of urban and rural ecosystems recognizing that solutions in one domain can have ripple effects in the other For instance the book explores how rural land conservation can support urban carbon sequestration efforts or how sustainable urban design can reduce the pressure on natural rural resources These topics are crucial as the world faces environmental changes Cities are responsible for the majority of global emissions yet rural areas often suffer the consequences of climate impacts Understanding the geographic factors influencing both regions is crucial to developing tailored effective mitigation strategies The book explores the innovative approaches such as the use of nature based solutions in urban areas or regenerative agriculture in rural settings that offer promising routes for sustainable development The problem addressed in this book is the lack of a unified geographic perspective on climate change mitigation By discussing urban and rural strategies it aims to encourage cross disciplinary collaboration and inspire actionable solutions that answer to the needs of diverse communities Climate change is a global issue but its impacts and solutions are deeply localized understanding these geographic issues is essential for policymakers urban planners landscape architects environmental scientists and community leaders Targeted at academics professionals and policymakers involved in climate change urban planning landscape architecture and environmental management this book provides readers with the insights needed to create impactful location specific strategies for a more resilient and sustainable future
