The Evolution Conspiracy, Vol 1 Lisa A. Shiel, 2009-09 The Evolution Conspiracy exposes the faults in evolutionary theories the half truths and the inconsistencies through a secular lens Governing for Revolution Megan Stewart, 2021-03-18 For some rebel groups governance is not always part of a military strategy but a necessary element of realizing revolution through civil war In Fraud We Trust Wes Henricksen, 2024-11-15 Telling lies and falling for them is one of the things that makes us human The vast majority of these falsehoods are harmless and perfectly legal But when someone deceives another for material gain or profit inflicting injury in the process we give this kind of lie a special label fraud Most people are familiar with the concept and understand that fraud is prohibited by law What many fail to appreciate however is that the law does not treat all frauds equally If you defraud an individual you might end up in prison On the other hand if you defraud millions of people what Wes Henricksen calls fraud on the public you might end up wealthy or powerful or even get elected president In a perverse sense the bigger the fraud the more likely it is protected by the First Amendment and therefore legal As a result many of the largest and most destructive fraud schemes are allowed encouraged and richly rewarded Examples of fraud on the public are everywhere The fossil fuel industry long used PR firms and lobbyists to spread disinformation about oil's role in climate change Sugar companies misled the public about the dangers of high fructose corn syrup redirecting the public's attention to fat Cigarette manufacturers famously lied about the risks of tobacco and opioid makers lied about the effects of the drug Social media influencers and fringe media outlets promoted false claims about the COVID 19 pandemic being a government hoax Others claimed that vaccines were part of a sinister plot Politicians on both sides of the aisle lie with such regularity that people have become deeply cynical about whether to believe anything they say Henricksen shows that large scale fraud is carried out for many reasons beyond financial profit including political gain the prevention of justice and the falsification of history In addition to exposing the depths of the problem Henricksen gives readers a way forward He proposes we call these massive deceit campaigns by their proper name that we de weaponize the First Amendment which was never meant to shield swindlers and that we enact new laws that protect the public from fraud By revealing for the first time the root legal cause of the misinformation crisis and presenting novel solutions **In Fraud We Trust** speaks to the present moment as it offers answers for the future **Psychology and Mathematics Education** Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet

these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

Daily Skeptic
2016 Cody Scott,2016-12-19 The Daily Skeptic is a blog dedicated to investigating news articles science religion politics history articles and book reviews This book is a collection of those essays from 2016 with topics ranging from the 2016 election to social unrest to book reviews and historical investigation

Modelling Human Motion Nicoletta Noceti,Alessandra Sciutti,Francesco Rea,2020-07-09 The new frontiers of robotics research foresee future scenarios where artificial agents will leave the laboratory to progressively take part in the activities of our daily life This will require robots to have very sophisticated perceptual and action skills in many intelligence demanding applications with particular reference to the ability to seamlessly interact with humans It will be crucial for the next generation of robots to understand their human partners and at the same time to be intuitively understood by them In this context a deep understanding of human motion is essential for robotics applications where the ability to detect represent and recognize human dynamics and the capability for generating appropriate movements in response sets the scene for higher level tasks This book provides a comprehensive overview of this challenging research field closing the loop between perception and action and between human studies and robotics The book is organized in three main parts The first part focuses on human motion perception with contributions analyzing the neural substrates of human action understanding how perception is influenced by motor control and how it develops over time and is exploited in social contexts The second part considers motion perception from the computational perspective providing perspectives on cutting edge solutions available from the Computer Vision and Machine Learning research fields addressing higher level perceptual tasks Finally the third part takes into account the implications for robotics with chapters on how motor control is achieved in the latest generation of artificial agents and how such technologies have been exploited to favor human robot interaction This book considers the complete human robot cycle from an examination of how humans perceive motion and act in the world to models for motion perception and control in artificial agents In this respect the book will provide insights into the perception and action loop in humans and machines joining together aspects that are often addressed in independent investigations As a consequence this book positions itself in a field at the intersection of such different disciplines as Robotics Neuroscience Cognitive Science Psychology Computer Vision and

Machine Learning By bridging these different research domains the book offers a common reference point for researchers interested in human motion for different applications and from different standpoints spanning Neuroscience Human Motor Control Robotics Human Robot Interaction Computer Vision and Machine Learning Chapter The Importance of the Affective Component of Movement in Action Understanding of this book is available open access under a CC BY 4.0 license at link.springer.com

Emotional and Cognitive Overload Anne-Françoise Rutkowski, Carol Saunders, 2018-10-03 We live in a world of limitless information With technology advancing at an astonishingly fast pace we are challenged to adapt to robotics and automated systems that threaten to replace us Both at home and at work an endless range of devices and Information Technology IT systems place demands upon our attention that human beings have never experienced before but are our brains capable of processing it all In this important new book an in depth view is taken of IT's under studied dark side and its dire consequences on individuals organizations and society With theoretical underpinnings from the fields of cognitive psychology management and information systems the idea of brain overload is defined and explored from its impact on our decision making and memory to how we may cope with the resultant technostress Discussing the negative consequences of technology on work substitution technologically induced work family conflicts and organizational design as well as the initiatives set up to combat these the authors go on to propose measurement approaches for capturing the entangled aspects of IT related overload Concluding on an upbeat note the book's final chapter explores emerging technologies that can illuminate our world when mindfully managed Designed to better equip humans for dealing with new technologies supported by case studies and also exploring the idea of IT addiction the book concludes by asking how IT processes may aid rather than hinder our cognitive functioning This is essential reading for anyone interested in how we function in the digital age
