

LT lead to switch

LT connection

Coil

The ballast resistor - it may be fixed to the coil mountings or separately.

HT lead from coil

The most usual type of coil, with the HT connection at one end in the centre and LT connections on either side. The HT connector may be a push-in type with a rubber seal or have a screw-in sleeve, while the LT connectors are usually spade type, but sometimes screws are used.

The HT leads may be connected to the distributor by push-in connectors covered by rubber seals, by a screw-in sleeve, or they may be inserted from the side and fixed by screws.

Plug lead

The vacuum-advance tube may be a metal pipe with a screwed union, but a push-on sleeve like this is more usual and newer cars have plastic tubing.

Check that the leads are securely connected, and clean the insulation with a soft cloth.

Distributor cap

Clean the tip of the rotor arm by rubbing gently with a fine file or emery paper.
