Systems Atsushi Ohori, 2003-11-06 With warm hearted and friendly promotion by our Japanese friends Prof sushi Ohori Prof Tetsuo Ida and Prof Zhenjiang Hu and other distinguished professors and scholars from countries and regions such as Japan South Korea Singapore and Taiwan the 1st Asian Symposium on Programming Languages and Systems APLAS2003 took place in Beijing. We received 76 papers among which 24 were selected for the proceedings after serious evaluation which fully demonstrates the high quality of the collected papers. I hereby on behalf of the Program Committee and the Organization Committee of the symposium would like to extend the warmest welcome and hearty thanks to all colleagues who attended the symposium all scholars who generously contributed their papers and all those who were actively dedicated to the organization of this symposium. Over the past decade the Asian economy has undergone rapid development. Keeping pace with this accelerated economic growth Asia has made great headway in software integrated circuits mobile communication and the Internet. All this has laid a firm material foundation for undertaking theoretical research on computer science and programming languages. Therefore to meet the increasing demands of the IT market great opportunities and challenges in advanced research in these fields. I strongly believe that in the coming future with the persistent efforts of our colleagues the Asian software industry and research on computer science will be important players in the world economy on an equal footing with their counterparts in the United States and Europe.

Automated Software Diversity Per Larsen, Stefan Brunthaler, Lucas Davi, Ahmad-Reza Sadeghi, Michael Franz, 2022-05-31 Whereas user facing applications are often written in modern languages the firmware operating system support libraries and virtual machines that underpin just about any modern computer system are still written in low level languages that value flexibility and performance over convenience and safety. Programming errors in low level code are often exploitable and can in the worst case give adversaries unfettered access to the compromised host system. This book provides an introduction to and overview of automatic software diversity techniques that in one way or another use randomization to greatly increase the difficulty of exploiting the vast amounts of low level code in existence. Diversity based defenses are motivated by the observation that a single attack will fail against multiple targets with unique attack surfaces. We introduce the many often complementary ways that one can diversify attack surfaces and provide an accessible guide to more than two decades worth of research on the topic. We also discuss techniques used in

conjunction with diversity to prevent accidental disclosure of randomized program aspects and present an in depth case study of one of our own diversification solutions **System-on-Chip** Bashir M. Al-Hashimi, 2006-01-31 This book highlights both the key achievements of electronic systems design targeting SoC implementation style and the future challenges presented by the continuing scaling of CMOS technology
