Diatom Morphogenesis Vadim V. Annenkov, Joseph Seckbach, Richard Gordon, 2021-11-23

DIATOM MORPHOGENESIS A unique book presenting the range of silica structures formed by diatoms theories and hypotheses of how they are made and applications to nanotechnology by use or imitation of diatom morphogenesis There are up to 200 000 species of diatoms each species of these algal cells bearing an ornate amorphous silica glass shell The silica is structured at 7 orders of magnitude size range and is thus the most complex multiscalar solid structure known Recent research is beginning to unravel how a single cell marshals chemical physical biochemical genetic and cytoskeletal processes to produce these single cell marvels The field of diatom nanotechnology is advancing as this understanding matures Diatoms have been actively studied over the recent 10 20 years with various modern equipment experimental and computer simulation approaches including molecular biology fluorescence based methods electron confocal and AFM microscopy This

has resulted in a huge amount of information but the key stages of their silica morphogenesis are still not clear This is the time to reconsider and consolidate the work performed so far and to understand how we can go ahead The main objective of this book is to describe the actual situation in the science of diatom morphogenesis to specify the most important unresolved questions and to present the corresponding hypotheses The following areas are discussed A tutorial chapter with a glossary for newcomers to the field who are often from outside of biology let alone phycology Diatom Morphogenesis general issues including symmetry and size issues Diatom Morphogenesis simulation including analytical and numerical methods for description of the diatom valve shape and pore structure Diatom Morphogenesis physiology biochemistry and applications including the relationship between taxonomy and physiology biosilicification hypotheses and ideas about applications of diatoms Audience Researchers scientists and graduate students in the fields of phycology general biology marine sciences the chemistry of silica materials science and ecology
