

The background of the book cover is a photograph of ancient stone ruins. The ruins feature several large, semi-circular arches constructed from weathered, light-colored stone blocks. Some of the arches are partially collapsed or overgrown with green moss and small plants. The scene is set against a clear blue sky, with some green foliage visible in the foreground and to the left.

Water Projects and Technologies in Asia Hyoseop Woo, Hitoshi Tanaka, Gregory De Costa, Juan Lu, 2023-04-28 This book is a collection of highly refined articles on historical water projects and traditional water technologies of international interest in the Asian region addressing information on past water projects mostly before the 20th century in the Asian regions that are technically and culturally of interest and educationally valuable This book explores historical water projects in these regions presenting technologies used at the time including calculation and forecasting methods measurement material labor methodologies and even water culture It is expected that the old Asian wisdom of reviewing the old and learning the new would be realized to a certain extent in modern planning and practice of water projects This book will enable the reader to understand historical water projects and technologies in the Asian region It can be used as a one stop resource to source notable Asian water projects and their relevance to modern day technology In this regard this book is expected to be of interest to a variety of audiences including the corresponding Asian regions and other international audiences interested in Asian water history from an engineering perspective

Evolution of Water Supply Through the Millennia Andreas N. Angelakis, Larry W. Mays, Demetris Koutsoyiannis, Nikos Mamassis, 2012-04-14 Evolution of Water Supply Through the Millennia presents the major achievements in the scientific fields of water supply technologies and management throughout the millennia It provides valuable insights into ancient water supply technologies with their apparent characteristics of durability adaptability to the environment and sustainability A comparison of the water technological developments in several civilizations is undertaken These technologies are the underpinning of modern achievements in water engineering and management practices It is the best proof that the past is the key for the future Rapid technological progress in the twentieth century created a disregard for past water technologies that were considered to be far behind the present ones There are a great deal of unresolved problems related to the management principles such as the decentralization of the processes the durability of the water

projects the cost effectiveness and sustainability issues such as protection from floods and droughts In the developing world such problems were intensified to an unprecedented degree Moreover new problems have arisen such as the contamination of surface and groundwater Naturally intensification of unresolved problems led societies to revisit the past and to reinvestigate the successful past achievements To their surprise those who attempted this retrospect based on archaeological historical and technical evidence were impressed by two things the similarity of principles with present ones and the advanced level of water engineering and management practices

Evolution of Water Supply Through the Millennia is intended for engineers in water resources companies hydraulic design companies and water Institutes It can be used for all courses related to water resources

A Tale of Three Thirsty Cities Jaime-Chaim Shulman, 2017-11-01 In A Tale of Three Thirsty Cities The Innovative Water Supply Systems of Toledo London and Paris in the Second Half of the Sixteenth Century Chaim Shulman presents an analysis of three projects of urban water supply systems carried out between 1560s 1610s The technical and economic differences between these projects resulted from external conditions not directly related to the water supply problem Although the same basic technology was apparently available at the time in all cases the geographical engineering entrepreneurial and cultural nature of each region differed The inhabitants wellbeing improvement achieved varied accordingly Much broader insights are drawn on the policies of the three monarchies regarding the initiative of and support for grand scale public works in general

Arid Lands Water Evaluation and Management Robert Maliva, Thomas Missimer, 2012-06-09 A large part of the global population lives in arid lands which have low rainfall and often lack the water required for sustainable population and economic growth This book presents a comprehensive description of the hydrogeology and hydrologic processes at work in arid lands It describes the techniques that can be used to assess and manage the water resources of these areas with an emphasis on groundwater resources including recent advances in hydrologic evaluation and the differences between how aquifer systems behave in arid lands versus more humid areas Water management techniques are described and summarized to show how a more comprehensive approach to water management is required in these areas including the need to be aware of cultural sensitivities and conditions unique to many arid regions The integration of existing resources with the addition of new water sources such as desalination of brackish water and seawater along with reusing treated wastewater will be required to meet future water supply needs Also changing climatic conditions will force water management systems to be more robust so that future water supply demands can be met as droughts become more intense and rainfall events become more intense A range of water management techniques are described and discussed in order to illustrate the methods for integrating these
