Portals of Promise Debbie Pushor, the Parent Engagement Collaborative the Parent Engagement Collaborative, 2013-10-30 Working with parents is a significant aspect of educators roles yet it is rare to find curriculum in teacher education programs designed to prepare individuals to consider in philosophical theoretical and pedagogical ways who they will be in relationship with parents and why Schools therefore remain hierarchical structures in which parents are marginalized in relation to decisions affecting teaching and learning This book begins with Pushor's conceptualization of a curriculum of parents a curriculum which explores beliefs and assumptions about parents a vision for education in which educators work alongside parents and family members in the learning and care of children and a desire for reform She describes a curriculum of parents in the form of three graduate teacher education courses which she lived out in relationship with students Graduate students then capture their experiences immersed in this curriculum what they each took up how it shaped their knowledge attitudes and practices

and how they lived it out as they returned to their classrooms schools and early learning centres This book is a storied account of their intense immersion in a curriculum of parents and the resulting impact living that curriculum has had on who they are in relation to parents and families It is an honest and vulnerable account of their shared and individual journeys They puzzle over the complexities and the successes of their work and the resulting impact This is not a book of best practice but an invitation to other educators to consider as they did what they do and how it could be different **CENAS** Giuseppe Gambolati,2012-12-06 The Upper Adriatic Sea basin comprises a very precarious coastal environment subject to continuous changes which prove appreciable not only over the geological scale but also in historical and modern times According to some Authors the Venice Lagoon was formed 2000 3000 years ago and other lagoons e g the Grado Lagoon in the northernmost part of the Adriatic are even more recent In addition to lagoons the Upper Adriatic coastal area includes salt and fresh water marshes and reclaimed land separated by several watercourses originating from the Alpine and Apennine ranges with a ground elevation not exceeding in many places 2 m above the mean sea level msl A significant fraction of this lowland is already now below msl because of natural and anthropogenic land subsidence land reclamation and sea level rise occurred over the last century Natural land subsidence is still under way as a result of deep downward tectonic movement and consolidation of soils deposited in the most recent time Anthropogenic subsidence is primarily due to groundwater pumping for agricultural industrial civil and tourist use and to gas withdrawal from a large number of gas fields scattered through the Upper Adriatic basin and may still continue although at a reduced rate in the years to come At the same time msl is expected to rise in the next century due to global climate change mainly because of the greenhouse effect Social Choice Theory Jerry S. Kelly,2013-03-09 This is a textbook introducing selected topics in formal social choice theory Social choice theory studies group choices that are based on information about preferences of members of the group voting rules being one important special case This involves economics which provides the method of modelling individual decision making political philosophy which provides criteria about the allocation of decision influencing power and game theory which provides a framework for thinking about the strategies individuals employ in trying to influence the group choice The goal of this book is to take basic ideas like impossibility theorems rights exercising and strategy proofness and give the student just enough technical background to be able to understand these ideas in a logically rigorous way This is done through a set of 250 exercises that constitute the heart of the book and which differentiate this book from all other texts in social choice theory *Clinical Reasoning and Decision-Making in Psychiatry* Joseph F. Explores the performance of aging in the late style of Günter Grass, Ruth Klüger, Christa Wolf and Martin Walser. Demographers say that by the year 2060 every seventh person in Germany will be aged eighty or older and every third person over sixty-five. The prediction for other Western countries is scarcely different. Indeed, the aging society is seen by some as a graver threat than even global warming, with potentially unmanageable tensions relating to intergenerational relationships, work and benefits, and flows of people. This book explores the representation and performance of aging in recent late style German language fiction. It situates the authors chosen as case studies, Günter Grass, Ruth Klüger, Christa Wolf and Martin Walser, in their biographical and social contexts and explores the significance of their aesthetic figuring of aging for debates raging both in Germany and internationally. In particular, the book looks at gender, generations and trauma and their impact on how writers narrativize aging. Finally, it examines the timeliness of these different representations and late style performances of aging in the context of the shift of social, political and economic power away from the declining societies of the West to the ascendant societies of the East. Stuart Taberner is Professor of Contemporary German Literature, Culture and Society at the University of Leeds.

How Logic Works Hans Halvorson,2024-08-06 Logic instruction typically takes two forms The first has the aim of teaching students to solve a certain sort of problem as efficiently as possible This is the approach adopted by most logic textbooks and truth trees the most popular method gives students an algorithm for solving logic problems The second has as its aim teaching students a certain style of thinking and thus concerns itself with how students solve problems In How Logic Works Hans Halvorson introduces students to the methods of natural deduction a method which not only helps them solve problems but helps them to understand the principles of valid reasoning for themselves Halvorson uses formal logic to train students in the task of constructing paths between premises and conclusions The student then will become an expert traveller in logical space quickly recognizing the difference between a safe path where truth is guaranteed to be preserved and a hazardous path where truth might be lost This approach is premised on the fact that if a student learns natural deduction she learns a skill that transfers to any domain where valid deductive reasoning is useful
