Emerging Approaches for Typing, Detection, Characterization, and Traceback of Escherichia coli, 2nd Edition Pina M. Fratamico, Chitrita DebRoy, David S. Needleman, 2018-05-02

Pathogenic *Escherichia coli* strains cause a large number of diseases in humans including diarrhea hemorrhagic colitis hemolytic uremic syndrome urinary tract infections and neonatal meningitis while in animals they cause diseases such as calf scours and mastitis in cattle post weaning diarrhea and edema disease in pigs and peritonitis and airsacculitis in chickens The different *E coli* pathotypes are characterized by the presence of specific sets of virulence related genes Therefore it is not surprising that pathogenic *E coli* constitutes a genetically heterogeneous family of bacteria and they are continuing to evolve Rapid and accurate molecular methods are critically needed to detect and trace pathogenic *E coli* in food and animals They are also needed for epidemiological investigations to enhance food safety as well as animal and human health and to minimize the size and geographical extent of outbreaks The serotype of *E coli* strains has traditionally been determined using antisera raised against the 180 different O somatic and 53 H flagellar antigens However there are many problems associated with serotyping including it is labor intensive and time consuming cross reactivity of the antisera with different serogroups occurs antisera are available only in specialized laboratories and many strains are non typeable

Molecular serotyping targeting O group specific genes within the *E coli* O antigen gene clusters and genes that are involved in encoding for the different flagellar types offers an improved approach for determining the *E coli* O and H groups Furthermore molecular serotyping can be coupled with determination of specific sets of virulence genes carried by the strain offering the possibility to determine O group pathotype and the pathogenic potential simultaneously Sequencing of the O antigen gene clusters of all of the known O groups of *E coli* is now complete and the sequences have been deposited in the GenBank database The sequence information has revealed that some *E coli* serogroups have identical sequences while others have point mutations or insertion sequences and type as different serogroups in serological reactions There are also a number of other ambiguities in serotyping that need to be resolved Furthermore new *E coli* O groups are being identified Therefore there is an essential need to resolve these issues and to revise the *E coli* serotype nomenclature based on these findings There are emerging technologies that can potentially be applied for molecular serotyping and detection and characterization of *E coli* On a related topic the genome sequence of thousands of *E coli* strains have been deposited in GenBank and this information is revealing unique markers such as CRISPR clustered regularly interspaced short palindromic repeats and virulence gene markers that could be used to identify *E coli* pathotypes Whole genome sequencing now provides the opportunity to study the role of horizontal gene transfer in the evolution and emergence of pathogenic *E coli* strains Whole genome sequencing approaches are being investigated for genotyping and outbreak investigation for regulatory and

public health needs however there is a need for establishing bioinformatics pipelines able to handle large amounts of data as we move toward the use of genetic approaches for non culture based detection and characterization of E coli and for outbreak investigations Developing Reading Comprehension Katherine A. Enforcement Programs in Virginia ,2005 Red light running which is defined as the act of a motorist entering an intersection after the traffic signal has turned red caused almost 5 000 crashes in Virginia in 2003 resulting in at least 18 deaths and more than 3 800 injuries In response to a June 2 2004 directive from Virginia Secretary of Transportation Whittington W Clement an evaluation of the photo red enforcement programs that operate in Virginia was undertaken Generally Virginia s photo red programs are technically feasible Case law strongly indicates that the programs pass legal muster in the three key areas privacy equal protection and due process and public opinion surveys suggest that roughly two thirds of respondents support red light cameras There is however a practical issue with regard to issuing citations for out of state motorists as noted in the report Although an economic analysis was not feasible in the study time frame a limited fiscal analysis suggests that in general Virginia localities are not generating net revenue Finally an operational analysis based on violations and crashes shows a potential but not definite safety improvement The cameras clearly affect driver behavior across the 23 intersections where reliable citation data could be obtained citations decreased by an average of 21% per intersection Further the data show that the cameras are correlated with a definite decrease in crashes that are directly attributable to red light running a definite increase in rear end crashes a possible decrease in angle crashes a net decrease in injury crashes attributable to red light running and an increase in total injury crashes More time is needed to determine whether the severity of the eliminated red light running crashes was greater than that of the induced rear end crashes The report recommends that Virginia s photo red enforcement programs be continued for an additional year to resolve this question and to collect additional data that was not feasible during the 6 month time frame of this report **Animal**
