Ubiquitin and Ubiquitin-Relative SUMO in DNA Damage Response Kristijan Ramadan, Ivan Dikic, 2018-02-09 DNA damage response DDR is a term that includes a variety of highly sophisticated mechanisms that cells have evolved in safeguarding the genome from the deleterious consequences of DNA damage It is estimated that every single cell receives tens of thousands of DNA lesions per day Failure of DDR to properly respond to DNA damage leads to stem cell dysfunction accelerated ageing various degenerative diseases or cancer The sole function of DDR is to recognize diverse DNA lesions signal their presence activate cell cycle arrest and finally recruit specific DNA repair proteins to fix the DNA damage and thus prevent genomic instability DDR is composed of hundreds of spatiotemporally regulated and interconnected proteins which are able to promptly respond to various DNA lesions So it is not surprising that mutations in genes encoding various DDR proteins cause embryonic lethality malignancies neurodegenerative diseases and premature ageing The importance of DDR for cell survival and genome stability is unquestionable but how the sophisticated network of hundreds of different DDR proteins is spatiotemporally coordinated is far from being understood In the last ten years ubiquitin ubiquitination and the ubiquitin

relative SUMO sumoylation have emerged as essential posttranslational modifications that regulate DDR. Beside a plethora of ubiquitin and sumo E1 activating enzymes, E2 conjugating enzymes, E3 ligases and ubiquitin sumo proteases involved in ubiquitination and sumoylation, the complexity of ubiquitin and sumo systems is additionally increased by the fact that both ubiquitin and sumo can form a variety of different chains on substrates which govern the substrate fate such as its interaction with other proteins, changing its enzymatic activity or promoting substrate degradation. The importance of ubiquitin SUMO systems in the orchestration of DDR is best illustrated in patients with mutations in E3 ubiquitin ligases BRCA1 or RNF168. BRCA1 is essential for proper function of DDR and its mutations lead to triple negative breast and ovarian cancers. RNF168 is an E3 ubiquitin ligase which creates the ubiquitin docking platform for recruitment of different DNA damage signalling and repair proteins at sites of DNA lesion and its mutations cause RIDDLE syndrome characterized by radiosensitivity, immunodeficiency and learning disability. In addition, recently discovered the ubiquitin receptor protein SPRTN is part of the DNA replication machinery and its mutations cause early onset hepatocellular carcinoma and premature ageing in humans. Despite more than 700 different enzymes directly involved in ubiquitination and sumoylation processes, only a few of them are known to play a role in DDR. Therefore, we feel that the role of ubiquitin and the ubiquitin related SUMO in DDR is far from being understood and that this is the emerging field that will hugely expand in the next decade due to the rapid development of a new generation of technologies which will allow us a more robust and precise analyses of human genome transcriptome and proteome. In this Research Topic, we provide a comprehensive overview of our current understanding of ubiquitin and SUMO pathways in all aspects of DDR from DNA replication to different DNA repair pathways and demonstrate how alterations in these pathways cause genomic instability that is linked to degenerative diseases, cancer and pathological ageing.

Introduction to Engineering Mathematics Volume - II : For APJAKTU Lucknow H K Dass, Rajnish Verma & Rama Verma, The book Introduction to Engineering Mathematics II has been conceptualized specifically according to the New Syllabus 2022 onwards of A P J Abdul Kalam Technical University APJAKTU Lucknow. It covers important topics such as Linear Differential Equations of nth Order with Constant Coefficients, Second Order Linear Differential Equations with Variable Coefficients, Method of Variation of Parameters, Cauchy Euler Equation, Applications of Differential Equations in Solving Engineering Problems, Laplace Transform and Properties, Sequence and Series, Tests for Convergence of Series, Fourier Series, Functions of Complex Variable, Harmonic Function, Milne's Thompson Method, Conformal Mapping, Taylor's and Laurent's Series, Residue Theorem and Applications etc. for sound conceptual understanding of students. Latest Question papers have been solved and included in the book. Also, short questions have been added at the end of each chapter for better preparation of examinations.

[Criminalising Dissent](#) Aytekin Kaan

Kurtul,2025-03-31 This book addresses one of the oldest political offences in the European continent l se majest in light of its historical evolution and the threat it poses to a democratic public sphere in modern day Europe The Republic of Turkey which serves as the focal point of this book epitomises the chilling ab use of l se majest laws due to the sheer number of criminal investigations on the basis of l se majest as well as the relatively low threshold for permissible criticism in defamation cases concerning the head of state In this regard through a comparative analysis encompassing multiple European jurisdictions and international human rights law this work illustrates that the excesses in Turkey should not be treated as an alien practice but rather as a caution for liberal political systems in Europe in view of the Western European origins of Turkish l se majest and the erosion of the rule of law Thus the volume stands as both a warning and a call for the abolition of l se majest laws as a democratic necessity beyond their inherent contradiction with state obligations stemming from international human rights law As a comprehensive work on European l se majest this book will function as a point of reference for legal scholars and practitioners alike as it offers a historical and theoretical background in addition to its rich commentary on how l se majest cases are assessed by domestic criminal courts and international human rights bodies The book will also be of use to political scientists and journalists who wish to learn more about how heads of state can effectively become immune to criticism through the use of criminal law and what can be done when faced with a l se majest charge for doing one s job
