Nitride Semiconductors Pierre Ruterana, Martin Albrecht, Jörg Neugebauer, 2006-05-12 Semiconductor components based on silicon have been used in a wide range of applications for some time now. These elemental semiconductors are now well researched and technologically well developed. In the meantime the focus has switched to a new group of materials: ceramic semiconductors based on nitrides are currently the subject of research due to their optical and electronic characteristics. They open up new industrial possibilities in the field of photosensors as light sources or as electronic components. This collection of review articles provides a systematic and in depth overview of the topic on both a high and current level. It offers information on the physical basics as well as the latest results in a compact yet comprehensive manner. The contributions cover the physical processes involved in manufacture from semiconductor growth via their atomic structures and the related characteristics right up to future industrial applications. A highly pertinent book for anyone working in applied materials research or the semiconductor industry. Diamond Based Composites Mark A. Prelas, Andrew Benedictus, Li-Te Steven Lin, Galina Popovici, Peter Gielisse, 2012-12-06 Diamond based composites with their advantages of hardness, high Young's modulus and the like have demonstrated new and unusual features such as stability to high temperatures and pressure shocks and a large internal surface that can be controlled to offer customised electrical, magnetic and optical properties leading to efficient filters, absorbents, sensors and other tools for environmental control and monitoring. The current book covers the synthesis of materials, their characterization and properties, trends in high pressure and high temperature technologies, low pressure technologies, basic principles of DBC material science and future developments in electronics, optics, industrial tools and components, biotechnology and medicine. Wide band gap materials are considered ranging from molecular clusters, nanophase materials, growth, processing and synthesis. The processing of composite based materials can be classified into six basic methods: in situ growth, high pressure, high temperature, catalytic conversion, mix and sinter, c BN plus metal ceramic, polymer mix, direct sintering, direct polymorphic conversion, shock, detonation and SHS sintering. Covalently Bonded Disordered Thin-Film Materials: Volume 498 M. P. Siegel, W. I. Milne, J. E. Jaskie, 1998-04-22 The MRS Symposium Proceedings series is an internationally recognised reference suitable for researchers and practitioners. **Growth and Optical Studies of Boron Nitride Films on Silicon Substrates** Charles Albert Taylor, 1996 Solid State Technology, 1986 Circuit Cellar Ink, 1993 **Government Reports, Announcements & Index**, 1989-07 Science Citation Index, 1994 Vols for 1964 have guides and journal lists.
