Animal Cells in Culture reviews the state of the art in animal cell biotechnology with emphasis on the sequence of events that occur when generating a biological from animal cells in culture. Methods that enable adjustment of nutrient feed streams into perfusion bioreactors so as to increase productivity are described. A number of issues are also addressed such as the usefulness of the fingerprint method for cell characterization. Comprised of 135 chapters, this book begins with an overview of the problems and benefits of animal cell culture followed by a discussion on the isolation of immortal murine macrophage cell lines. The reader is systematically introduced to the use of DNA fingerprinting to characterize cell banks, immortalization of cells with oncogenes, lipid metabolism of animal cells in culture, and energetics of glutaminolysis. Subsequent chapters explore serum free and protein free media, the physiology of animal cells, gene expression in animal cell systems, and animal cell bioreactors. The monitoring and assay of animal cell parameters are also considered along with downstream processing and regulatory issues. This monograph will be of interest to students, practitioners, and investigators in the fields of microbiology and biotechnology.

Animal Cells as Bioreactors Terence Cartwright, 1994-08-26
 Because of their complexity, the new generation of genetically engineered protein drugs can only be made by biotechnological methods using cultures of animal cells. This book covers all aspects of the technologies needed to turn animal cells into an acceptable and cost-effective tool for drug production. This includes modifying them genetically so that they produce the right product in high yield, getting them to grow reproducibly on an industrial scale, and extracting the required product from them. It also covers biological safety issues and the verification of the chemical and biological nature of the protein drug produced. The work covers developments in all of these areas and how they all need to be integrated for the

design of an effective biotechnological production process It therefore provides a comprehensive guide to this area of biotechnology
