Diverse Early Childhood Education Policies and Practices Amita Gupta,2014-04-29 Diverse Early Childhood Education Policies and Practices explores issues in early childhood education and teacher preparation in five Asian countries India Singapore China Sri Lanka and the Maldives Some observed classrooms in these countries reflect influences that are simultaneously indigenous and colonial local and global By highlighting the diverse and often hybrid classroom pedagogies at work in these 21st century Asian classrooms the discussions in this book take into consideration the influence of globalization on local policies and practices and the challenge educators face when they are expected to reconcile different and sometimes conflicting cultural

and pedagogical world views Through a research driven analysis of key issues such as recent revisions to national early childhood education policies perceptions on play based and child centered pedagogy curriculum and learning materials and an emphasis on the teaching of values this book illuminates the diversity of the observed classrooms as well as current trends in early childhood education in parts of Asia The cross national perspective serves to expand and diversify the global discourse of early childhood education and teacher education *The Publishers' Trade List Annual* ,1980 **Human Nature and Biocultural Evolution** Joseph Lopreato,2024-12-02 First published in 1984 Human Nature and Biocultural Evolution aims to delineate a theory of human nature viewed as an interrelated set of genetically programmed behavioral predispositions and a theory of biocultural evolution The author s approach is based on the hypothesis that innate predispositions and cultural environmental factors cooperate to determine human behavior and socio cultural forms Professor Lopreato begins by tracing the development of evolutionary biology up to sociobiology It is his argument that the social and biological disciplines have for over a century been moving towards a synthesis and that Homo sapiens is neither just another animal nor so unique a being that culture has become divorced from its genetic underpinnings The argument is supported with evidence from evolutionary biology and social science with a critical discussion of basic issues of behavioral science and with an analysis of certain famous theories in social science e g theories of suicide anomie capitalism which prove to be richer and more complete when viewed from a biocultural perspective The theory of human nature is arrived at through a rich analysis of ethnographic psychological and sociological arguments and data as well as facts and theories from comparative zoology In the process the author treats critically numerous theoretical problems associated with topics such as exploitation class consciousness structured inequality reciprocal behavior territorial aggression religious ritual socialization ethnicity and prejudice The author concludes with an examination of behavioral predispositions that are hypothesized to be at the base of cultural variation *The Museum of Natural History. With Introductory Essay on the Natural History of the Primeval World, Etc* Sir John RICHARDSON,1869
