Woods, Andrew S. Flies, 2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn't ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e.g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species *Clinical Laboratory Animal Medicine* Lesley A. Encountering Evolution Johanna Frejd,2019-08-21 This thesis explores preschool class children s meaning making processes when they encounter evolution By adopting social semiotic and sociocultural perspectives on meaning making three group based tasks were designed Video data from the activities were analysed using a multimodal approach The analysis focuses on how the communicated science content affects the science focus of the tasks how different materials function as semiotic resources and influence meaning making and interactive aspects of doing science in the meaning making processes The findings reveal that by using the provided materials and their previous experiences the children argue for different reasons for animal diversity and evolution Throughout the tasks a child centric view of life emerged in a salient manner This means that apart from the science focus the children also emphasise other aspects that they find important The child centric perspective is suggested to be a strength that enables children to engage in science activities The results show that the provided materials had three functions Children use materials as resources providing meaning This means that the children draw on the meaning potential of the materials a process that is influenced by their previous experiences Moreover in interaction with peers the materials also serve as communicative and argumentative tools Thus access to materials influences the children s meaning making and enables them to discuss evolution and do science The findings also reveal an

intimate relationship between task context and interaction More scripted tasks convey more child adult interaction scaffolding while less scripted tasks during which children build on previous experiences instead of communicated science content stimulates child child interaction mutual collaboration In scaffolding interactions a greater emphasis is placed on the science topic of the task due to guidance from the adult Consequently meanings made by children in more scripted tasks are more likely to be scientifically correct However if the teacher or the adult steps back and allows the children to engage in mutual collaboration they engage in multiple ways of doing science through evaluating observing describing and comparing Overall the research reported in this thesis suggests that task contexts and materials have a great impact on children s meaning making and how science is done Den h r avhandlingen utforskar f rskolebarns meningsskapandeprocesser kring evolution Tre gruppbaseade aktiviteter har designats Videodata har analyserats utifr n ett multimodalt perspektiv p kommunikation Analysen fokuserar p hur kommunicerade naturvetenskapliga beskrivningar av evolution p verkar aktiviteternas naturvetenskapliga fokus materials funktion som semiotiska resurser och p verkan p meningsskapande och interaktiva aspekter av att g ra naturvetenskap Avhandlingens resultat visar att barnen genom att anv nda material och sina tidigare erfarenheter f r olika resonemang kring varf r djur utvecklas och blir olika Genomg ende har barnens syn p v rlden en betydande roll f r meningsskapandeprocessen Det betyder att barnen f rutom att fokusera p det naturvetenskapliga inneh llet i aktiviteterna ocks l gger stor vikt vid andra aspekter som r viktiga f r dem Det barncentrerade perspektivet f rsl s vara en styrka som m jligg r f r barn att delta i och engageras av naturvetenskapliga aktiviteter De material som barnen har tillg ng till de i de olika aktiviteterna har tre funktioner Barnen anv nder material som meningsgivande resurser vilket betyder att barnen anv nder materialens meningspotential Denna process p verkas av barnens tidigare erfarenheter Vidare anv nds materialen som kommunikativa och argumentativa redskap i interaktion med andra Tillg ngen till material p verkar s ledes barnens meningsskapande och m jligg r att de kan diskutera evolution p verkar barnens naturvetenskapliga handlande Avhandlingens resultat visar p en n ra relation mellan uppgifters kontext och interaktion Mer styrda aktiviteter medf r mer interaktion mellan barn och vuxna scaffolding Mindre styrda aktiviteter d r barnen bygger p sina tidigare erfarenheter stimulerar ist llet interaktion mellan barnen mutual collaboration Som ett resultat av den vuxnes agerande l ggs det st rre vikt vid det naturvetenskapliga inneh llet evolution i scaffolding interaktioner F ljaktligen r de meningar som skapas i mer styrda aktiviteter mer i linje med naturvetenskapliga f rklaringar till evolution Samtidigt finns det ett samband mellan att den vuxne kliver t sidan och att barnen kliver fram och g r naturvetenskapliga handlingar som att utv rdera observera beskriva och j mf ra Sammanfattningsvis visar den h r avhandlingen att uppgifters kontext och material har stor p verkan p barns meningsskapande och hur de g r naturvetenskap

Tschinkel, 2013-03-11

Walter Tschinkel's passion for fire ants has been stoked by over thirty years of exploring the rhythm and drama of *Solenopsis invicta*'s biology. Since South American fire ants arrived in Mobile, Alabama, in the 1940s, they have spread to become one of the most reviled pests in the Sunbelt. In *Fire Ants*, Tschinkel provides not just an encyclopedic overview of *S. invicta*, how they found colonies, construct and defend their nests, forage and distribute food, struggle among themselves for primacy, and even relocate entire colonies, but a lively account of how research is done, how science establishes facts, and the pleasures and problems of a scientific career. Between chapters, detailed enough for experts but readily accessible to any educated reader, interludes provide vivid verbal images of the world of fire ants and the people who study them. Early chapters describe the several failed and heavily politically influenced eradication campaigns, and later ones the remarkable spread of *S. invicta*'s polygyne form, in which nests harbor multiple queens and colonies reproduce by budding. The reader learns much about ants, the practice of science, and humans' role in the fire ant's North American success.
