Principles of Veterinary Animal Physiology Tanmoy Rana, 2025-10-22 This textbook for advanced graduate and postgraduate veterinary students introduces animal behaviour offering insights into its origins cognitive aspects communication environmental influences biological mechanisms complex behaviours adaptive strategies and practical applications The initial chapters present fundamental principles underpinning animal behaviour elucidating the roles of evolution genetics and ecology Subsequent chapters introduce the role of natural selection habitat selection and pheromones alongside exploring conflicts predator prey dynamics and the impact of domestication on behaviour The book further delves into topics such as habitat selection foraging strategies predator prey dynamics and the effects of domestication on behaviour It unravels the mysteries of animal defences altruism social dominance territoriality and the finely tuned art of food and habitat selection Additionally it covers the biological mechanisms governing behaviour unearthing the roles played by neuroendocrinology biological clocks and genetics Towards the end the textbook examines the practical relevance of behavioural insights in veterinary science

Key Features Offers a comprehensive exploration of animal behaviour encompassing a wide range of topics from evolutionary principles to intricate behavioural patterns Provides understanding of the origins of animal behaviour including the roles of evolution genetics and ecology Highlights the practical applications of behavioural insights in veterinary science and related fields Delves into specialized areas of animal behaviour such as innate behaviours animal memory pheromones and cooperation Explores how animals adapt to their environments covering topics like foraging behaviour predator detection and self defensive behaviours Addresses the impact of environmental factors hormones and drugs on behaviour offering a holistic view of animal responses to their surroundings

Biomimetic Architecture and Its Role in Developing Sustainable, Regenerative, and Livable Cities Mohsen Aboulnaga, Samaa E. Helmy, 2022-09-01 This book focuses on understanding biomimetic architecture and its role as a sustainable design tool It presents the role of biomimicry in mitigation and adaptation to climate change and examines how biomimetic architecture can provide healthy solutions to limit the spread of COVID 19 in buildings and cities Coverage includes global examples of biomimetic approaches and buildings an evaluation of the performance of biomimicry applications in architecture to illustrate best practices and an exploration of how nature can offer inspiration in building design to conserve resources and save energy use as well as curb carbon emissions a reaffirmed goal of COP 26 and an outcome of Glasgow Climate Pact Finally the book presents guidelines to enhance urban areas and healthier spaces in buildings to meet COVID 19 social distance regulations and beyond Examines global applications of biomimicry in architecture Highlights the importance of biomimicry in driving livability in cities and buildings Explores the role of

biomimetic architecture in mitigating climate change The line of argument developed is highly relevant to the present in addition to being original and pertinent to research on urban regeneration especially in regard to the exploration of the use of biomimicry architecture in response to changing urban demands Alessandra Battisti Ph D Professor of Architecture University of Rome La Sapienza *The Hidden Mechanics of Exercise* Christopher M. Gillen, 2014-03-17 The Hidden Mechanics of Exercise reveals the microworld of the body in motion from motor proteins that produce force to enzymes that extract energy from food and tackles questions athletes ask What should we ingest before and during a race How does a hard workout trigger changes in our muscles Why does exercise make us feel good **General and Comparative**

Endocrinology A.M. Schreiber, 2023-11-24 General and Comparative Endocrinology An Integrative Approach takes a holistic approach to endocrinology introducing students to the diverse facets of this interdisciplinary science ranging from the medical to comparative domains while also exploring evolutionary environmental and conservation specializations within the field The textbook is founded on the principle that students interested in the health sciences will benefit from understanding how proficiency in endocrine function among a diversity of organisms contributes to advances in modern medicine Likewise students intrigued by comparative physiology will benefit from the wealth of knowledge derived from medical clinical endocrinology the historical bedrock of the field This textbook represents the modern field of endocrinology in its totality by addressing topics and recent advances not currently discussed in other introductory endocrinology textbooks Key Features Introduces the broad and interdisciplinary scope of endocrinology Provides clear chapter objectives and key concepts Includes summary and synthesis questions for each chapter that are suitable for exams and quizzes Includes a chapter devoted to endocrine disrupting chemicals Describes the roles played by the endocrine system in important health challenges related to appetite regulation obesity diabetes and other diseases stemming from mismatches to modernity Integrates evolutionary and comparative approaches to hormones and health *Fish Diseases and Disorders* John F. Leatherland, P. T. K. Woo, 2006 The book is important for those involved in aquaculture and those wishing to learn more about the effects of non infectious disorders and the mechanisms of response within fish and is thoroughly recommended Journal of Fish Diseases

Handbook of Meat and Meat Processing Y. H. Hui, 2012-01-11 Retitled to reflect expansion of coverage from the first edition Handbook of Meat and Meat Processing Second Edition contains a complete update of materials and nearly twice the number of chapters Divided into seven parts the book covers the entire range of issues related to meat and meat processing from nutrients to techniques for preservation *Nature* Sir Norman Lockyer, 2004 *Animals and Environments* Dr. Steve Morris, André Vosloo, 2005 This volume collects selected papers from the 3rd ICCPB in Africa Animals and Environments A wide and integrated discussion of how animals persist in their normal habitats aims to improve our appreciation of animal interaction with and response to environment In a time of persistent reductionism in biological studies the collected papers discuss both breadth and depth of adaptive animal biology from more holistic perspectives The

discussion ranges from unicellular organisms to whole animals Themes include molecular bases of physiological response to hypoxia and the role of hypoxia inducible factors adaptive mechanisms of ion homeostasis in crustaceans signaling and respiration in insects aspects of metal contamination extremes of temperature and water availability foraging predation and the acquisition of food in the light of specific environmental demands This volume will be of specific interest researchers in the field of adaptive molecular and evolutionary physiology and biochemistry Biologists interested in how animals respond to their environment be it with a molecular physiological or ecological emphasis will find the breath of issues both stimulating and informative Animals and Environments collates works in Comparative and Evolutionary Physiology and Biochemistry covering a range of subject material and approaches seldom brought together in a single volume Inclusion in a single volume of molecular biochemical and physiological material aimed at addressing adaptation to environment Many of the individual works are reviews in their own right and provide an excellent resource The diversity of approaches and material examining the evolution of adaptive mechanisms
