

THE SKELETON
The skeleton is the framework of the body, supporting the soft organs and protecting them. It is composed of bones and cartilage. The bones are made of a hard, white, mineralized substance called bone tissue. The cartilage is a soft, white, fibrous substance. The skeleton is divided into the axial skeleton (skull, spine, and rib cage) and the appendicular skeleton (arms and legs).

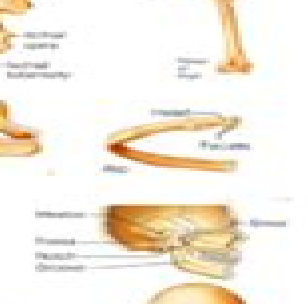

THE MUSCLES
The muscles are the soft tissue that contracts to move the bones. They are made of muscle fibers. The muscles are divided into the skeletal muscles (attached to bones) and the smooth muscles (not attached to bones). The skeletal muscles are voluntary muscles, meaning they can be controlled by the conscious mind. The smooth muscles are involuntary muscles, meaning they cannot be controlled by the conscious mind.

THE JOINTS
The joints are the points where two or more bones meet. They allow the bones to move relative to each other. There are three main types of joints: ball-and-socket joints, hinge joints, and pivot joints. Ball-and-socket joints allow for the greatest range of motion. Hinge joints allow for flexion and extension. Pivot joints allow for rotation.

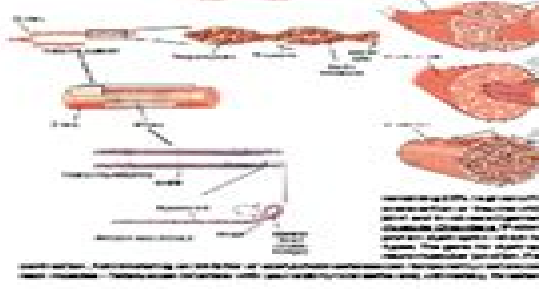

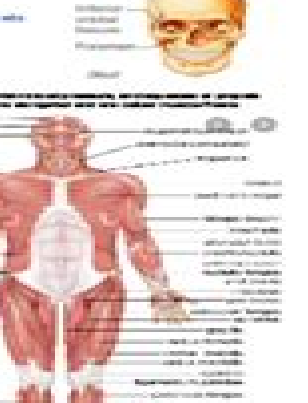

THE NERVOUS SYSTEM
The nervous system is the body's communication system. It consists of the brain, spinal cord, and nerves. The brain is the control center of the body. The spinal cord is a long, thin, tube-like structure that runs down the back. The nerves are bundles of fibers that carry messages between the brain and the rest of the body.

THE CIRCULATORY SYSTEM
The circulatory system is the body's transport system. It consists of the heart, blood vessels, and blood. The heart is a muscular organ that pumps blood. The blood vessels are tubes that carry blood. The blood is a fluid that carries oxygen and nutrients to the cells and carries away waste products.

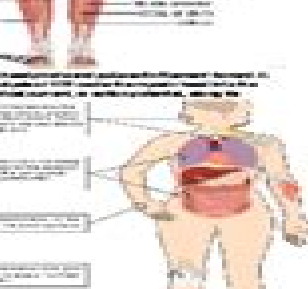

THE DIGESTIVE SYSTEM
The digestive system is the body's food processing system. It consists of the mouth, esophagus, stomach, and intestines. The mouth is where food enters the body. The esophagus is a tube that carries food from the mouth to the stomach. The stomach is a muscular organ that breaks down food. The intestines are a long, coiled tube that absorbs nutrients from food.

THE RESPIRATORY SYSTEM
The respiratory system is the body's breathing system. It consists of the trachea, bronchi, and lungs. The trachea is a tube that carries air from the mouth to the lungs. The bronchi are tubes that branch off from the trachea and lead to the lungs. The lungs are two large, spongy organs that exchange oxygen and carbon dioxide.

THE EXCRETORY SYSTEM
The excretory system is the body's waste removal system. It consists of the kidneys, ureters, and bladder. The kidneys are two bean-shaped organs that filter waste from the blood. The ureters are tubes that carry urine from the kidneys to the bladder. The bladder is a muscular organ that stores urine.

THE REPRODUCTIVE SYSTEM
The reproductive system is the body's system for producing offspring. It consists of the testes, ovaries, and associated structures. The testes are two glands in males that produce sperm. The ovaries are two glands in females that produce eggs. The associated structures include the vas deferens, fallopian tubes, and uterus.

Anatomy And Physiology Key 173

Mary Baker Eddy

Anatomy And Physiology Key 173:

Yeah, reviewing a book **Anatomy And Physiology Key 173** could add your close contacts listings. This is just one of the solutions for you to be successful. As understood, finishing does not recommend that you have astonishing points.

Comprehending as well as accord even more than further will have enough money each success. neighboring to, the message as with ease as insight of this Anatomy And Physiology Key 173 can be taken as competently as picked to act.
