

ANATOMY & PHYSIOLOGY

Now in **FULL COLOR**
with **3D Model QR codes**

Anatomy and Physiology explores the essentials of human structure and function through engaging, generously illustrated, full color activities. Each body system is explored in detail. Homeostasis provides a unifying theme connecting the body systems and highlighting their interrelatedness. Students are encouraged to explore each body system within the contexts of four themes: disease, medicine and technology, aging, and exercise. The result is a rounded exploration of human anatomy and physiology.

BIOZONE's unique, interactive worktext approach encourages direct interaction with the content, allowing students to record their answers within the context of the stimulus material and form a record of work for quick and easy revision.

Activity number

Activities are numbered to make navigation through the book easier.

QR Codes

Scan the QR code to directly interact with 3D models.

Activity coding system

Tab codes indicate online support via BIOZONE's Resource Hub and identify any of the four themes covered in the activity: Aging, Exercise, Disease, and Medicine & Technology.

108 Structure of the Mammalian Heart

Key ideas: Mammals have a four-chambered heart, divided into left and right halves, and acting as a double pump. The heart is the centre of the human circulatory system. It is a hollow, muscular organ made up of four chambers (two atria and two ventricles) that alternately fill and empty of blood, acting as a double pump. The left side pumps the oxygenated blood to the rest of the body, and the right side pumps deoxygenated blood to the lungs.

The heart is not a spherical organ. Although the quantity of blood pumped by each side is the same, the walls of the two ventricles are shaped so that the left ventricle has a thicker wall than the right ventricle to enable it to pump blood to the rest of the body.

- 1. Right atrium: receives deoxygenated blood in the anterior and posterior vena cavae.
- 2. Right ventricle: pumps deoxygenated blood to the lungs via the pulmonary artery.
- 3. Left atrium: receives oxygenated blood returning to the heart from the lungs via the pulmonary veins.
- 4. Left ventricle: pumps oxygenated blood to the head and body via the aorta.

1. In the schematic diagram of the heart below, label the four chambers and the main vessels entering and leaving them. Then complete the diagram of blood flow, using large coloured circles to mark the direction of flow of the four ventricles.

Key Idea

Each activity has a key idea summarizing its primary focus. It helps students to understand where the activity's emphasis lies.

Comprehensive, engaging diagrams

Engaging, high quality diagrams provide a visual focus whilst delivering important information in an accessible format.

Content organization

Logically organized content makes it easier for students to access and engage with the information.

Direct questioning

A direct questioning style helps students easily identify what is being asked.

Write-on answers

Students input their answers directly onto the page. This becomes their **record of work** and helps them when it is time to review for tests and exams.
