Economic Review, Kerala ,2013 Geoinformatics and Atmospheric Science Tomasz Niedzielski,Krzysztof Migala,2017-09-09 This volume presents recent developments in atmospheric sciences driven by numerical modeling which makes use of geospatial technologies and increasing computational power It gathers examples of how geoinformatics supports meteorological climatological and water related studies One of the most important features of geospatial technologies is that they provide methods and tools which may be utilized in real time or near real time in order to monitor and predict atmospheric processes This is particularly crucial in areas where dynamics of atmospheric phenomena is considerable and causes difficulties in accurate forecasting One of such areas is the transitional zone between oceanic and continental features of the mid latitude climate Good examples of investigations into the transitional zone come from Poland and its neighboring countries The topical volume provides the reader with a selection of papers on physically based and data based modelling of weather related phenomena over Poland This main theme of the topical volume is extended to cover case studies on the use of geoinformatics in atmospheric studies in other regions at a range of spatial scales *The Urban Climatic Map* Edward Ng,Chao Ren,2015-09-07 Rapid urbanization higher density and more compact cities have brought about a new science of urban climatology An understanding of the mapping of this phenomenon is crucial for urban planners The book brings together experts in the field of Urban Climatic Mapping to provide the state of the art understanding on how urban climatic knowledge can be made available and utilized by urban planners The book contains the technology methodology and various focuses and approaches of urban climatic map making It illustrates this understanding with examples and case studies from around the world and it explains how urban climatic information can be analysed interpreted and applied in urban planning The book attempts to bridge the gap between the science of urban climatology and the practice of urban planning It provides a useful one stop reference for postgraduates academics and urban climatologists wishing to better understand the needs for urban climatic knowledge in city planning and urban planners and policy makers interested in applying the knowledge to design future sustainable cities and quality urban spaces **Management** Stephen P. Foundations for the Next-Generation Electric Grid National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Analytical Research Foundations for the Next-Generation Electric Grid, 2016-05-15 Electricity is the lifeblood of modern society and for the vast majority of people that electricity is obtained from large interconnected power grids However the grid that was developed in the 20th century and the incremental improvements made since then including its underlying analytic foundations is no longer adequate to completely meet the needs of the 21st century The next generation electric grid must be more flexible and resilient While fossil fuels will have their place for decades to come the grid of the future will need to accommodate a wider mix of more intermittent generating sources such as wind and distributed solar photovoltaics Achieving this grid of the future will require effort on several fronts There is a need for continued shorter term engineering

research and development building on the existing analytic foundations for the grid But there is also a need for more fundamental research to expand these analytic foundations Analytic Research Foundations for the Next Generation Electric Grid provide guidance on the longer term critical areas for research in mathematical and computational sciences that is needed for the next generation grid It offers recommendations that are designed to help direct future research as the grid evolves and to give the nation s research and development infrastructure the tools it needs to effectively develop test and use this research
