Alzheimer's: Be Aware and Prepared Elaine Scholly, 2023-09-16 Alzheimer's Be Aware and Prepared BAP shifts the focus from the patient's behavior to the emotional needs of the caregiver and family. The three stages of Alzheimer's describe a patient's progression through mild, moderate, and severe stages. For the caregiver, BAP introduces the Scholly Stages: the Most Important, the Most Demanding, and the Most Difficult stages of caregiving. It acknowledges a caregiver's struggles, then provides encouragement and solutions. Visit ElaineScholly.info for related information. BAP merges studied data from various sources to help create personal solutions for the anxieties of caregiving. Seemingly impossible situations can be redirected to generate more positive results. It explains the relationship between the brain/body and Alzheimer's and helps navigate the necessity of early planning. BAP identifies the actions needed in order to become aware and prepared and encourages all ages to be mindful. BAP becomes a solid reference book along the way. Everyone, children, grandchildren, young adults, parents, can benefit from the guidance offered in BAP. Being a caregiver is definitely a challenge, but it can alter your life in the best possible way by strengthening you inside.

Nature, Nurture, and Neurodevelopment Roya Kelishadi, 2024-12-09 From the birth, children grow and learn in response to the stimulation from their social and physical environment. Research on early brain development provides a great opportunity to examine how nature and nurture work together to shape human development. Through the use of sophisticated technology, scientists have discovered how early brain development and nurturing care interact to create a foundation for future growth and learning. New evidence supports the effect of nature/nurture interactions on childhood development, primarily through advances in longitudinal studies. Neural processes influenced by genetic and epigenetic variation and other underlying factors, including environment, infection, inflammation, hormonal, and immune functions, etc., have critical roles in brain development. The term nurturing care was described as a core component for achieving optimal development in the early years of life when the brain is developing and the child is more responsive to interventions. Recent evidence has revealed that parenting interventions that include components to enhance child learning or strengthen parent-child relationships are effective for improving early cognitive, language, motor, and socioemotional development. This book aims: 1 to describe various domains of neurodevelopment in children; 2 to report the estimates of children at risk of not achieving their developmental potential; 3 to present a life course conceptual framework of early childhood development; 4 to review new aspects of neurodevelopment in children, e.g., neurobiology, neuroimmunology; 5 to describe the risk factors affecting early brain development; 6 to report the neurodevelopment screening tools in children; 7 to assess the role of nurturing care in early brain development; and 8 to describe programs and policies implemented for early childhood development and their effectiveness for improving development in childhood.

Medical Visualization

and Applications of Technology – Volume 2 Jenny Clancy, Matthieu Poyade, 2024-08-21 This edited volume encompasses chapters on novel and innovative research in the applications of leading digital technologies in an accessible and engaging way. By utilising cutting edge and ever progressive technology in visualization it will enhance our understanding and application in our everyday lives. This volume shows how we can use Extended Reality 3D animations and serious games to benefit the learner, educator, clinician, patient, parent and carer. Visualization techniques like Virtual, Augmented and Mixed Reality and show how they can be utilised to improve training and understanding of anatomy, surgery and clinical assessment. This is covered specifically for emergency practitioners in enhancing their understanding of ECGs for potential myocardial infarction by using augmented reality. From a translational medicine perspective and pre-operative paediatric surgical planning the benefits of augmented reality are examined as to what might be found intra-operatively from imaging techniques. Educational applications of digital technologies using serious games and Extended Reality are examined. We show how Mixed Reality can aid understanding in cellular anatomy for our learners and researchers alike. We also show how serious games can have applications in diverse areas like parasite infections and neuroanatomy education and training. Finally from a clinical perspective the use of 3D animations and their applications is discussed for vertebral fractures and increasing parent/carer awareness through interactive applications. Also the use of 3D animations in cerebral magnetic resonance angiography for global education highlights the great benefits of these tools and technologies. There is something for the researcher, clinician, educator, patient and carer as we explore novel technologies. These are applied locally, nationally and globally as we advance our understanding of the world-changing influence that digital technologies have on our day to day life.
