Extending the Complexity of the Leaky Pipeline Phenomenon in Natural Science Anna Wolfram, 2023-10-19 In the realm of global innovation STEM powers knowledge based societies However ongoing gender disparities curtail the complete utilisation of human capital As argued in the goal congruity theory women s choices to communal goals prompts female exits from STEM Exploring this theory in natural science and academia two questions arise 1 Does the leaky pipeline persist and where are gaps 2 Do female scientists leave to afford other goals Stats show early career gender balance but senior positions lack women Notably men dominate decision making roles Qualitative research with 26 female scientists reveals an overall positive and communal perception of natural science and academia Moreover the perceived affordance of communal values within science majorly contributes to the desire of female researchers to continue pursuing an academic path These findings contradict the literature established goal congruity theory and thus provide an experienced based foundation to extend the complexity of the leaky pipeline phenomenon in natural science

Branching Processes and Their Applications Inés M. del Puerto, Miguel González, Cristina Gutiérrez, Rodrigo Martínez, Carmen Minuesa, Manuel Molina, Manuel Mota, Alfonso Ramos, 2016-09-06 This volume gathers papers originally presented at the 3rd Workshop on Branching Processes and their

Applications WBPA15 which was held from 7 to 10 April 2015 in Badajoz Spain <http://branching.unex.es/wbpa15/index.htm>
The papers address a broad range of theoretical and practical aspects of branching process theory. Further, they amply demonstrate that the theoretical research in this area remains vital and topical as well as the relevance of branching concepts in the development of theoretical approaches to solving new problems in applied fields such as Epidemiology, Biology, Genetics, and of course Population Dynamics. The topics covered can broadly be classified into the following areas: 1. Coalescent Branching Processes, 2. Branching Random Walks, 3. Population Growth Models in Varying and Random Environments, 4. Size Density Resource Dependent Branching Models, 5. Age Dependent Branching Models, 6. Special Branching Models, 7. Applications in Epidemiology, 8. Applications in Biology and Genetics. Offering a valuable reference guide to contemporary branching process theory, the book also explores many open problems paving the way for future research.

Now revised for the first time in more than a decade, this fourth edition provides a comprehensive summary of the global patterns of cancer incidence and mortality, current understanding of the major causal determinants, and a rationale for preventive interventions. Special attention is paid to molecular epidemiologic approaches that address the wider role of genetic predisposition and gene-environment interactions in cancer etiology and pathogenesis. New and timely chapters on environmental and social epidemiologic factors include: The role of social class disparities, The role of obesity and physical inactivity, The potential effects of electromagnetic fields and radiofrequency radiation, The principles of cancer chemoprevention. For both seasoned professionals and newer generations of students and researchers, this fourth edition of CANCER EPIDEMIOLOGY AND PREVENTION remains the authority in the field, a work of distinction that every lab, library, student, professional, or researcher should have close at hand. **The ASCRS Textbook of Colon and Rectal Surgery**
