Anaesthesia for Day Case Surgery Jan Jakobsson,2009-06-11 The use of ambulatory or day case surgery has grown tremendously in Western countries in recent years at the expense of more traditional in hospital surgical care In the US up to 70 80% of all surgical procedures are currently performed on an ambulatory basis The adaptation of day case surgery still varies considerably between countries and even within countries in Europe The transition from traditional in hospital care to day case surgery or ambulatory procedure calls for vigilant planning of steps in preoperative care and a team effort to optimise all parts of patient care as well as care logistics Drug selection drug combination drug administration and preparation of patients are all substantially different in the day case surgery setting than in the traditional in hospital care setting It is therefore crucial that anaesthetists surgeons and other clinicians involved in administering day case surgery are aware of these differences to ensure safe and effective delivery of care Part of the Oxford Anaesthesia Library this practical pocketbook provides an overview of the scope of day surgical anaesthesia and features simple and ready to use suggestions for the selection of drugs techniques and protocols to follow in everyday day case surgical clinical practice
