Almost every medical faculty possesses anatomical and or pathological collections human and animal preparations wax and
other models as well as drawings photographs documents and archives relating to them In many institutions these collections
are well preserved but in others they are poorly maintained and rendered inaccessible to medical and other audiences This
volume explores the changing status of anatomical collections from the early modern period to date It is argued that
anatomical and pathological collections are medically relevant not only for future generations of medical faculty and future
research but they are also important in the history of medicine the history of the institutions to which they belong and to the
wider understanding of the cultural history of the body Moreover anatomical collections are crucial to new scholarly inter
disciplinary studies that investigate the interaction between arts and sciences especially medicine and offer a venue for the
study of interactions between anatomists scientists anatomical artists and other groups as well as the display and
presentation of natural history and medical cabinets In considering the fate of anatomical collections and the importance of
the keeper s decisions with respect to collections this volume will make an important methodological contribution to the
study of collections and to discussions on how to preserve universities academic heritage Craniofacial Anatomy and
