Raynaud, 2020-08-25 *Anatomy-Head and Neck* Andrew Zbar, 2024-11-21 This book offers an easy to follow technique to better appreciate the anatomy of the head and neck providing a concise accessible and well illustrated pocketbook It is aimed principally at undergraduate and postgraduate students of anatomy in a wide range of fields such as medicine dentistry and the paramedical services that include physiotherapy occupational therapy and the biological sciences The book should prove useful for postgraduate trainees in general and specialist surgery radiology and interventional and emergency medicine Providing a style of teaching that is grounded in a clinical context the book explains why the anatomy that has been learned actually matters Relevant developmental and comparative anatomy is incorporated placing the subject in an historical context The book is footnoted and includes pertinent references and multichoice questions at the end of each chapter The anatomy conveyed is presented with simple line drawings designed to answer specific anatomical questions Students are encouraged to reproduce these images with the view that if they can draw the anatomy of a region they will understand and remember it well This book changes the way anatomy is taught using a short practical guide to cover specific body regions **Arab Painting** Anna Contadini, 2010 Arab painting preserved mainly in manuscript illustrations of the 12th to 14th centuries is here treated as an artistic corpus fully deserving of appreciation in its own terms and not as a mere precursor to Persian painting The book assembles papers by a distinguished list of scholars that illuminate the variety of material that survives in scientific as well as literary manuscripts Because of the contexts in which the paintings appear a major theoretical concern is precisely the relationship of painting to text It rejects earlier scholarly habits of analysing paintings in isolation and proposes the integration of text and image as a more satisfactory framework within which to elucidate the characteristics and functions of this impressive body of work This second revised edition includes addenda and corrigenda Visual Perception Nicholas Wade, Mike Swanson, 2013-03-05 Does the world appear the same to everyone Does what we know determine what we see Why do we see the world as we do Vision is our most dominant sense From the light that enters our eyes to the complex cognitive processes that follow we derive most of our information about what things are where they are and how they move from our vision Visual Perception takes a refreshingly different approach to this enigmatic sense From the function that

vision serves for an active observer to the history of visual perception itself the third edition has been extensively revised updated and expanded while still preserving the essential features of historical context neurophysiology and independent thought that made the earlier editions so engaging Covering the perception of location motion object recognition and with up to date information on the workings of the visual brain the 3rd edition looks at how our ideas have been shaped not just by psychology but by art optics biology and philosophy The emphasis on understanding vision as a basis for action in the real world has also been expanded to cover seeing representations of all sorts whether they are pictures or computer generated displays The 3rd Edition of Visual Perception is a readable accessible and truly relevant introduction to the world of perception and will be welcomed by students of visual perception as well as anyone with a general interest in the mysteries and wonder of vision

Visual Perception Nicholas J. Wade, Michael Swanson, 2013 Vision is our most dominant sense From the light that enters our eyes to the complex cognitive processes that follow we derive most of our information about what things are where they are and how they move from our vision

A Natural History of Vision Nicholas J. Wade, 2000-01-31 This illustrated survey covers what Nicholas Wade calls the observational era of vision beginning with the Greek philosophers and ending with Wheatstone's description of the stereoscope in the late 1830s

Tatler, 2005 Eye movements are a vital part of our interaction with the world They play a pivotal role in perception cognition and education Research in this field is now proceeding at a considerable pace and casting new light on how the eyes move and what information we can derive during the frequent and brief periods of fixation However the origins of this work are less well known even though much of our knowledge was derived from this research with far more primitive equipment This book is unique in tracing the history of eye movement research It shows how great strides were made in this area before modern recording devices were available especially in the measurement of nystagmus When photographic techniques were adapted

to measure discontinuous eye movements from about 1900 many of the issues that are now basic to modern research were then investigated One of the earliest cognitive tasks examined was reading and it remains in the vanguard of contemporary research Modern researchers in this field will be astonished at the subtleties of these early experimental studies and the ingenuity of interpretations that were advanced one and even two centuries ago Though physicians often carried out the original eye movement research later on it was pursued by psychologists it is within contemporary neuroscience that we find these two strands reunited Anyone interested in the origins of psychology and neuroscience will find much to stimulate and surprise them in this valuable new work
