## **Analyse Spatiale Les Localisations Géographie:**

L'analyse spatiale Denise Pumain, Thérèse Saint-Julien, 2004 L'analyse spatiale s'appuie sur un ensemble de concepts et de méthodes qui aident à penser l'aménagement de la surface de la terre par les sociétés humaines. Ce manuel s'adresse à tous ceux qui cherchent à comprendre en quoi le changement des situations géographiques exprime l'évolution des rapports des sociétés à leur espace et leurs territoires. En cours d'intégration dans les systèmes d'information géographique, les outils de l'analyse spatiale font désormais partie de la culture de base de tout géographe et plus largement de tout praticien des questions territoriales. Cet ouvrage explique les concepts et les outils spatiaux fondamentaux pour l'étude des localisations, la représentation et la description des objets géographiques, la description de leurs localisations, la méthode d'étude de la morphologie des réseaux et de la construction de régions homogènes.

Analyse spatiale de l'information géographique Régis Caloz, Claude Collet, 2011-01-01 Les systèmes d'information géographique SIG caractérisent la fois un modèle numérique de l'espace géographique mais aussi l'ensemble des outils de traitement de l'information associés. Combinant informations géographiques et statistiques, ils permettent un suivi cartographique et quantitatif des dynamiques territoriales. La plupart des collectivités publiques ont aujourd'hui achevé l'acquisition et la structuration de ce type de données. Les bases résultantes sont mises à disposition du public et des praticiens, mais la richesse et la diversité des informations qu'elles proposent rendent leur exploitation complexe. Dans la mesure où elles requièrent des connaissances développées en analyse spatiale, cet ouvrage se propose de procurer au lecteur l'ensemble des outils nécessaires à la maîtrise et à l'exploitation de ces méthodes, notamment dans le cadre de la géostatistique appliquée aux phénomènes discrets et continus. L'analyse du relief, la formulation de requêtes spatiales, les aptitudes des réseaux, l'accessibilité et les zones d'influence, et les objets zonaux, l'analyse multivariée associée à l'aide à la décision, la dynamique spatiale ou la propagation des incertitudes. Manuel sans équivalent couvrant l'ensemble du domaine de l'exploitation des informations spatiales et de leur analyse dans une perspective d'aide à la décision. Trois niveaux de lecture : bases, compréhension scientifique des phénomènes, méthodes opérationnelles. Nombreuses questions de réflexion et suggestions de lecture en fin de chaque chapitre. Clair et didactique, cet ouvrage s'adresse à un large public d'étudiants en géosciences et en sciences de l'environnement, mais aussi à des géographes et d'ingénieurs praticiens. **Universal Ontology of Geographic Space: Semantic Enrichment for Spatial Data** Podobnikar, Tomaž, Čeh, Marjan, 2012-03-31 A universal approach to the ontology of geographic space has already been and is going to be a comprehensive task for establishing more effective spatial models. The concept of a universal spatial ontology should be independent of location, culture, and time. It should be fundamental and universal in the same way that the

number  $p$  defines the ratio between the diameter and the circumference of a circle The term universal therefore means all embracing and for general propose Universal Ontology of Geographic Space Semantic Enrichment for Spatial Data aims to escalate the current scope of research to support the development of semantically interoperable systems of geographic space This reference will aid university lecturers and professors students researchers developers of spatial applications

Bavoux,2016-03-02 On n'a jamais autant parlé de géographie. Mais si elle a beaucoup dit sur la mondialisation l'aménagement des territoires les changements climatiques l'emprise du cyberspace l'explosion de la mobilité ou les tensions internationales elle reste cependant une science méconnue. Cet ouvrage vient combler ce manque. En montrant la richesse des approches géographiques et le dynamisme de leurs tendances les plus actuelles, cette nouvelle édition entièrement remaniée et enrichie présente l'ensemble des méthodes bouleversées par les évolutions de la cartographie géographique SIG, l'essor de l'informatique et la géographie webmapping, globes virtuels et la prise en compte nouvelle des représentations et comportements spatiaux. Elle s'interroge sur les objectifs de la géographie et son utilité dans la société, étudiant en profondeur la manière dont elle est enseignée et ses rapports avec la politique l'écologie l'économie ou la culture. Un manuel à l'attention de tous les étudiants en géographie des enseignants qui s'interrogent sur les métamorphoses de leur discipline et de tous ceux qui dans leur vie professionnelle ou leur vie tout court ont rapport avec les dimensions spatiales et territoriales. *La modélisation en*

*géographie* Denise Pumain,2020-03-01 La modélisation des villes et des territoires a beaucoup progressé depuis 20 ans grâce aux systèmes d'information géographique, la mise disposition sur Internet de grandes masses de données géolocalisées et la montée en performance des méthodes informatiques pour la simulation et l'exploration des modèles dynamiques. La modélisation en géographie explique les différentes étapes de la construction de ces modèles depuis leurs bases conceptuelles jusqu'à leurs utilisations pratiques, permettant de mieux comprendre les formes d'organisation et les processus de l'évolution des villes et territoires. Cet ouvrage rend ainsi accessibles les fondements théoriques de la construction et les délicates opérations de la sélection d'un modèle, les applications des fractales et des lois d'échelle, la connaissance de la morphologie des villes et l'organisation des transports urbains. Il présente en détail des méthodes inédites de construction et d'exploration des modèles et de visualisation des données et des résultats. *Regional Airports* M. N. Postorino,2011

Regional Airports have become increasingly important elements of the air network system both as feeders of hub and spoke services and as origins or destination of point to point services. Congestion at the main hubs and increasing demand for air transportation both for passengers and freight services necessitates revaluation of the overall air systems with regional airports taking an ever expanding role. Optimisation of air transportation systems within the framework of other forms of transport plays an important part in the present quest for sustainability. Congestion nowadays is not only associated with countries such as the USA and those in the EU but also a variety of other countries with fast developing economies where there is a strong increase in air transportation demand. The revolution of the existing airport system including regional airports requires the developing of new optimisation tools which can simulate the whole process and produce optimal solutions. These models are also essential to predict future demands and in particular the role that regional airports will play. The siting of new airports involves taking into consideration a variety of environmental, ecological, social and economic factors which transcend the problem of transportation resources optimisation itself. Regional Airports can be a powerful driving force behind the

development of an area and conversely can result in major problems if they are wrongly sited      **Horizons géographiques**
