

The Digestive System

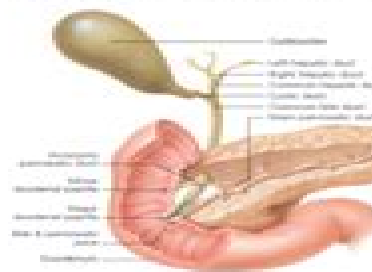

What is the digestive system?

The digestive system, or **gastrointestinal tract**, is a tract of organs that is responsible for digesting and absorbing nutrients from food. Food enters through the mouth, is broken down in the stomach, and then moves through the small intestine, where nutrients are absorbed. The digestive system also includes accessory organs that help in the process, such as the liver, pancreas, and gallbladder.

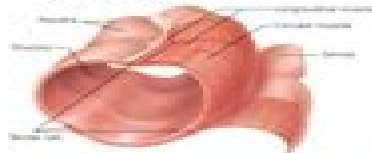

Liver, pancreas & gallbladder

After leaving the stomach, digested material enters the duodenum, the first part of the small intestine, where it is mixed with bile secreted by the **liver**. The liver is a large organ in the upper right of the abdomen. It produces bile, which is stored in the **gallbladder**. Bile then enters the duodenum to help in the digestion of fats.

Layers of large intestine

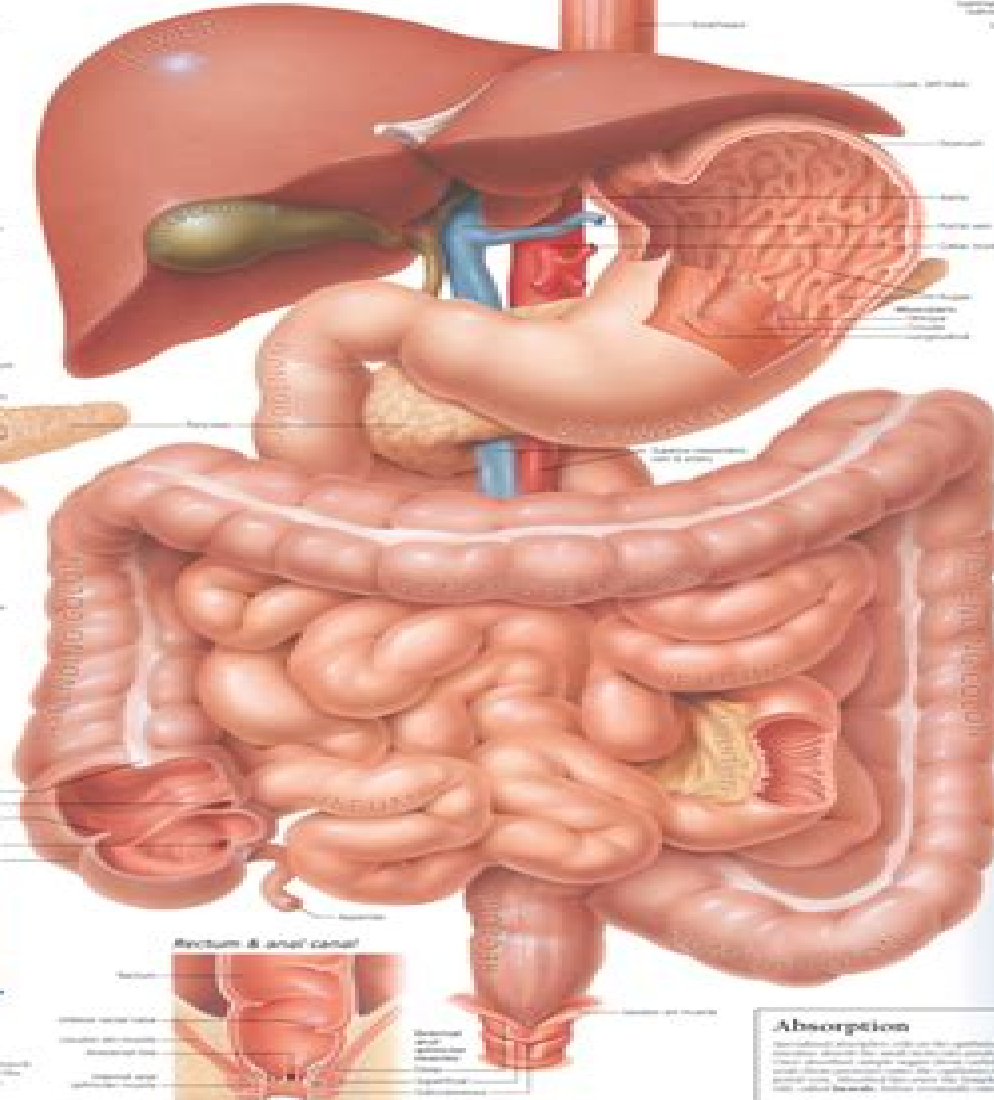

Large intestine

The large intestine consists of the cecum, the appendix, ascending colon, transverse colon, descending colon, sigmoid colon, and rectum. It is responsible for absorbing water and electrolytes from the remaining indigestible food matter, thereby forming feces.

Peristaltic action

Food material is pushed through the digestive system by a series of waves of contraction called peristalsis. These contractions are initiated by the nervous system and the smooth muscle, which also causes the food to move forward.

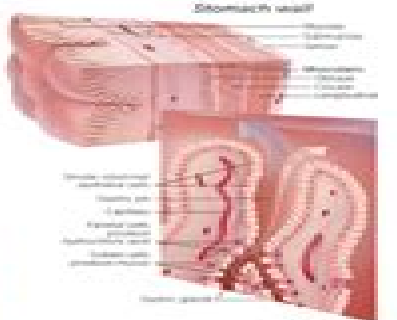

The mouth & salivary glands

Chewing the food breaks it into smaller pieces, making it easier to swallow. Saliva, secreted by the salivary glands, helps in the digestion of food. It contains the enzyme amylase, which breaks down carbohydrates into simpler sugars.

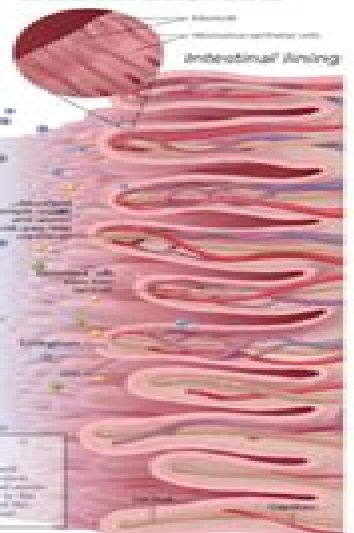

The stomach

The stomach is a large, muscular organ that is responsible for the digestion of food. It is located in the upper left part of the abdomen. The stomach wall is composed of several layers, including the mucosa, submucosa, muscularis, and serosa.

Small intestine

The small intestine is a long, coiled tube that is responsible for the digestion of food. It is located in the central part of the abdomen. The small intestine is divided into three parts: the duodenum, jejunum, and ileum.

Absorption

The process of absorption involves the movement of nutrients from the small intestine into the bloodstream. This process occurs in the villi, which are small, finger-like projections that line the small intestine.
