Health of Children and Adolescents Kai Yuan,Yanping Bao,Yue Leng,Xiaoyu Li,2023-11-13 The coronavirus disease 2019
COVID 19 epidemic has dramatically spread throughout the world which has also caused mental health problems among the
public especially vulnerable groups like children and adolescents As a traumatic event the outbreak of COVID 19 might
increase the prevalence of a series of mental health problems in children and adolescents probably due to social distancing
school closures as well as separation from parents and home quarantine The continuing spreading of COVID 19 infection as
well as vaccine uptake strategies quarantine policies and health services during post epidemic era may also have a long
lasting side effect on children and adolescents Children and adolescents are in critical periods of neurodevelopment and once
they develop mental health problems the long lasting negative influence might span across their lifetime Moreover long term
multisystem sequelae including neurological and psychiatric systems of COVID 19 infection in children also compromise the
development of physical and mental wellbeing in adulthood Though there have been several studies on mental health
consequences and long term impact on the mental health of children and adolescents caused by COVID 19 there is still
limited data and more comprehensive studies are needed on this important topic **Metals Abstracts** ,1994
