somehow perturbs central tolerance to the insulin family triggering thus autoimmune T1D Our group contributed with a mini review focusing on cell cell interactions within the thymus involving TECs and thymocytes and the role of the Aire gene on the induction of central tolerance throughout the modulation of TRA expression in mTECs In addition we discuss the recent evidence that Aire also regulate the expression of miRNAs in these cells On its turn the Aire dependent miRNAs might exert control over TRAs We raise issues that besides the transcriptional control exerted by Aire PGE could also be being controlled through posttranscriptional mechanism involving miRNAs A very pertinent question raised by Gabriel Skogberg and cols is on the role of exosomes on TRA presentation by TECs to thymocytes and its implication in the thymocyte selection Exosomes may be liberated by TECs to the extracellular milieu and transport TRAs as well as MHC molecules establishing intercellular communication to enhance antigen presentation to developing thymocytes Authors discuss how intercellular communication via exosomes within the thymus could have consequences on TRA presentation and finally on central tolerance The thymic crosstalk i e the reciprocal control by the close contact between TECs and thymocytes which influences the differentiation of both types of cells was elegantly reviewed by No lla Lopes and cols Authors discuss the role of dendritic cells DCs subsets in the process of deletion of autoreactive T cells and the generation of natural Tregs and raise questions how hematopoietic cells may control the organization of the thymic medulla Thymus is an organ composed of different cell types including TECs DCs macrophages among other cell types and of course thymocytes Recently researchers have identified an unexpected cell type formed by B cells which may be originated from intrathymic B lymphopoiesis or immigration from the periphery Tomoyoshi Yamano and cols contributed with a mini review discussing the role of thymic B cells expressing MHC II CD80 and Aire in the crosstalk with CD4 single positive cells Authors raise questions how these cells might play a role as antigen presenting cells in an unpredicted way within the thymus The regulation of T cell development is apparently well resolved however several unsolved questions remain This important aspect is represented in this Research Topic through the mini review by Iris Caramalho and cols Authors show new questions on the beginning of Treg lineage commitment their spatial localization within the human thymus and their molecular components Cell migration within the thymus is crucial for the central tolerance Developing thymocytes migrate throughout the thymus being exposed initially to the cortex and then to the thymic medulla where they respectively undergo positive and negative selection Chemokines represent key regulators for thymocyte migration Zicheng Hu and cols argue the role of chemokines in the thymic cell migration and induction of central tolerance Thymic atrophy during senescence is widely recognized however poorly understood In addition to the atrophy due to senescence thymus involutes in response to a variety of stimuli including microbial infections The mouse model of Trypanosoma cruzi infection corresponds to an adequate mouse model to access this question Leandra Linhares Lacerda and cols show results on the role of miRNAs on regulation of chemotaxis which contribute to a better understanding while incites new issues of thymic involution Cellularity of mTECs is pivotal for cell cell interactions within the thymus which is required

for central tolerance Taishin Akiyama and cols argue the role of cytokines on cellularity of mTECs focusing into the molecular basis of cell cell interactions opening perspective on the use of mathematical models for understanding these processes Thymus morphogenesis is a central point with many open questions The mini review authored by Arnon Dias Jurberg and cols addresses the role of the large superfamily of TGF beta bone morphogenetic protein ligands in the thymus morphogenesis and in T cell differentiation This eBook provides an international and updated insight into the latest developments and open questions on the cellular and molecular bases of central tolerance induction **Keywords Index to U.S. Government Technical Reports (permuted Title Index)**.
