06. Another loudspeaker produces a sound of wavelength 0.40 m . Sound from the loudspeaker reaches a sound absorbing surface with a gap of width 0.80 m at the centre.

Fig. 5.1 shows the arrangement.

Fig. 5.1

Explain whether it is possible to detect sound from the loudspeaker at either point J or at point K.

point J very little to no sound as diffraction is very little due to the gap being larger than wavelength

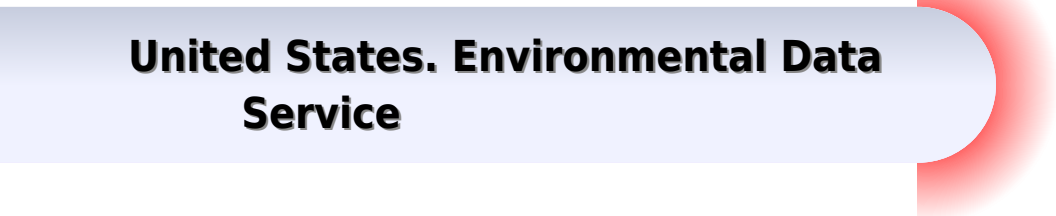

point K sound detected as the wavelength travels straight through the gap passing point K
