Development of Brushless Self-excited and Self-regulated Synchronous Generating System for Wind and Hydro Generators Izzat, Likaa Fahmi Ahmed, 2013-01-01 In this work a developed model of brushless synchronous generator of wound rotor type is designed analyzed by FEM practically applied and investigated A comparison of results with conventional machines is also performed The presented machine can be applied for multi pole wind hydro generators or double poles diesel engine generators It is self excited by residual magnetism and a connected capacitor It is also self regulated by making use of fluctuations at load or limited speed changes The generated voltage may last at extended speed range by arranging a generating system with variable capacitance By eliminating the permanent magnets or advanced manufacturing technology of rotor poles and without using extra rotating external DC exciters an efficient excitation field and an output of flat self compensated compound characteristic are obtained More the feature of damper windings is determined Concerning the fact of environmental diminishing of elements in materials of permanent magnets and D C Battery the presented novel machine is hence a good alternative and more economic from generators exist in the market Beside it is safer and highly recommended for power stability when connected to the grid Technical note - World Meteorological Organization World Meteorological Organization, 1966 **Diesel and Gas Turbine Progress**, 1959 **A Collection of Technical Papers**, 1966 NASA Technical Note United States. National Aeronautics and Space Administration, 1959 Power Electronics for Renewable and Distributed Energy Systems Sudipta Chakraborty, Marcelo G. Simões, William E. Kramer, 2013-06-12 While most books approach power electronics and renewable energy as two separate subjects Power Electronics for Renewable and Distributed Energy Systems takes an integrative approach discussing power electronic converters topologies controls and integration that are specific to the renewable and distributed energy system applications An overview of power electronic technologies is followed by the introduction of various renewable and distributed energy resources that includes photovoltaics wind small hydroelectric fuel cells microturbines and variable speed generation Energy storage systems such as battery and fast response storage systems are discussed along with application specific examples After setting forth the fundamentals the chapters focus on more complex topics such as modular power electronics microgrids and smart grids for integrating renewable and distributed energy Emerging topics such as advanced electric vehicles and distributed control paradigm for power system control are discussed in the last two chapters With contributions from subject matter experts the diagrams and detailed examples provided in each chapter make Power Electronics for Renewable and Distributed Energy Systems a sourcebook for electrical engineers and consultants working to deploy various renewable and distributed energy systems and can serve as a comprehensive guide for the upper level undergraduates and graduate students across the globe Generator with a Superconducting Magnetic Field for Use in 1-megawatt Space Power Systems Dale W.
