Mindsteps to the Cosmos Gerald S. Hawkins, 2002 Mindsteps to the Cosmos shows how modern global civilization depends on giant leaps of understanding that have been made in the past Science and technology have been inspired and formulated by the sky OCo the cosmos in which we live Human development could not have taken place on a cloud shrouded planet Mathematics was invented to track the movements of the sun moon and stars even though back then these were thought to be gods The space program has taken us beyond the earth and satellite systems are exploring to the ends of the visible universe This book provides the reader with algorithms to construct personal computer programs for finding the position of the moon and planets and for calculating dates through historic periods in the Egyptian as well as the old and new style calendars

The Flat Earth as Key to Decrypt the Book of Enoch Zen Garcia, 2015-10-25 Shortly after accepting the flat earth as a model for the world I decided to revisit the Book of the Courses of the Heavenly Luminaries to see if my new understanding would somehow mirror what Enoch was sharing as a motion for the sun and moon As I began to read chapters 71 82 I found to my utter amazement that I was able to grasp those passages I knew then that the vision that the angel Uriel had shown to Enoch could only be deciphered if one were to imagine Enoch's description of the revolution of the sun and the moon As seen from above the flat circular plane of the earth as described by Isaiah and that Enoch must have been taken up to perhaps where Polaris is centered directly above the North Pole and while looking down at the backdrop of the earth was instructed on the motions of both the sun and moon Without such conception it is in my opinion impossible to apply these descriptions to the model of the earth as a spherical planet
