The importance of penicillium notatum

Penicillium is an important genus of phylum ascomycota, found in the natural environment as well as in food and drug production. Some members of the genus produce penicillin, a molecule used as an antibiotic that kills or stops the growth of certain kinds of bacteria inside the body.

Food chain

The importance of the fungi in the food chain

In food chains, fungi act as decomposers, also called saprotrophs, which recycle nutrients in an ecosystem. Without fungi, forest floors would be covered in plant debris and animal carcasses; similarly other ecosystems would have a vast amount of waste piled up. Fungi break down plant components like lignin and cellulose, so they are particularly important in woody ecosystems. They also break down surface waste and release nitrogen back into the soil in the form of ammonium nitrate, a nutrient that plants need for survival.
