Partners in Science Robert E. Kohler, 2020-02-22 Robert Kohler shows exactly how entrepreneurial academic scientists became intimate partners in science with the officers of the large foundations created by John D Rockefeller and Andrew Carnegie and in so doing tells a fascinating story of how the modern system of grant getting and grant giving evolved and how this funding process has changed the way laboratory scientists make their careers and do their work This book is a rich historical tapestry of people institutions and scientific ideas It will stand for a long time as a source of precise and detailed information about an important aspect of the scientific enterprise It also contains many valuable lessons for the coming years John Ziman Times Higher Education Supplement *Artificial General Intelligence* Ben Goertzel, Laurent Orseau, Javier Snider, 2014-07-28 This book constitutes the refereed proceedings of the 7th International Conference on Artificial General Intelligence AGI 2014 held in Quebec City QC Canada in August 2014 The 22 papers and 8 posters were carefully reviewed and selected from 65 submissions Researchers have recognized the necessity of returning to the original goals of the field by treating intelligence as a whole Increasingly there is a call for a transition back to confronting the more difficult issues of human level intelligence and more broadly artificial general intelligence AGI research differs from the ordinary AI research by stressing on the versatility and wholeness of intelligence and by carrying out the engineering practice according to an outline of a system comparable to the human mind in a certain sense The AGI conference series has played and continues to play a significant role in this resurgence of research on artificial intelligence in the deeper original sense of the term of artificial intelligence The conferences encourage interdisciplinary research based on different understandings of intelligence and exploring different approaches **Phenomenology and the Natural Sciences** Joseph J. Kisiel, 1970 **Time And Science - Volume 2: Life Sciences** Remy Lestienne, Paul Harris, 2023-06-22 Life and Time are very closely linked because life needs the patience of eons to emerge and evolve and also due to the precision timing of neural networks in the perception of the world encoding information and performing actions A dozen renowned biologists and neuroscientists collaborate in this volume to explore the various facets of timing in the living world The temporal programming of the activity of the genetic code controls the essential mechanisms of individual development from zygote to adult while evolution uses the succession of generations to accomplish its work For its part the brain accomplishes the

miracle of justifying presentism and reconstructing the continuity of present time from the fragmented data accessible to the senses as well as measuring durations and dating events To this end the brain uses a multilevel temporal coding to transport and decode sensory information and prepare motor responses It is only gradually that we have discovered the temporal precision of the mechanisms involved of the order of a few milliseconds or less for the adjustment of neural networks or the synaptic plasticity used for memory formation Today the perfection of natural neural networks the energy saving use of spikes of electrical impulses to categorize the sensory environment and to guess its probable future is an example to the modelers and engineers of artificial intelligence
